The CN should get excessive body bags ready because if they decide to block Rt 14 then they are blocking an evacuation route. Did they know that Rt 14 is an evacuation route? And isn't it enough that Chicago's traffic is so bad – do they need to spread it out to the suburbs. Do they know this? Are they aware of that Rt 14 with major hospitals around the area? They are not considering any of this. Along with biological issues such as forest preserves that have been put into this area and set up and the rail road will destroy them along with polluting the area which is why residents have moved here is for cleaner air. And statically there is a rise in repertory conditions due to rise in pollution and according to the Academy of Pediatric Medicine the asthma in children in on the dangerous increase along with elderly. These things need to be considered. And basically if they think they have a fight on their hands now, wait to see what happens when this goes through.
