

STB UPDATE

JANUARY 23, 2018

Network continued to perform at high levels

- Dwell improved, velocity remained healthy following record prior week
- Right Car Right Train lower week-over-week
- Crew and power resource levels well matched to demand
- Hump yard performance steady
- Western terminals performing well
- Car fulfillment settled higher, averaging 97% year-to-date
- Local pull and place performance stable
- Customer problem logs at normal levels
- Interchange volumes current and gateways fluid

Network continues to perform well through widespread extreme cold temperatures and snow

Dwell improved, velocity remained healthy following record prior week

On Time Originations (%)

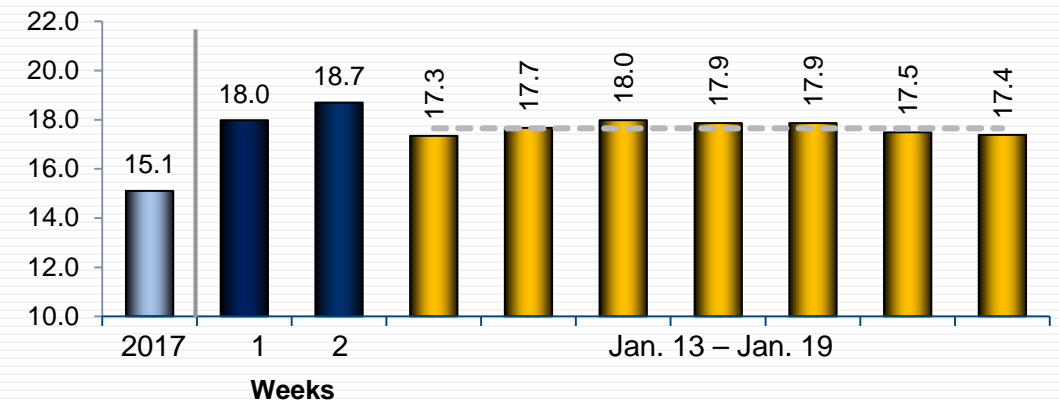

On Time Arrivals (%)

Dwell (hours)

Velocity (mph)

Right Car Right Train lower week-over-week

- Right Car Right Train is no longer a measure that CSX uses to manage its operation
 - In scheduled railroading, if a car can be advanced on another train to speed transit or ensure its on-time arrival, there is not one “right train”
- Car priority is to move cars quickly, on next available train
 - Asset utilization a key tenet of scheduled railroading
- Train priority is blocking integrity and departing all available, relevant cars from the yard
 - Blocking integrity certifies that a train is built correctly and shipments are headed to the correct location
 - Managed through field supervision

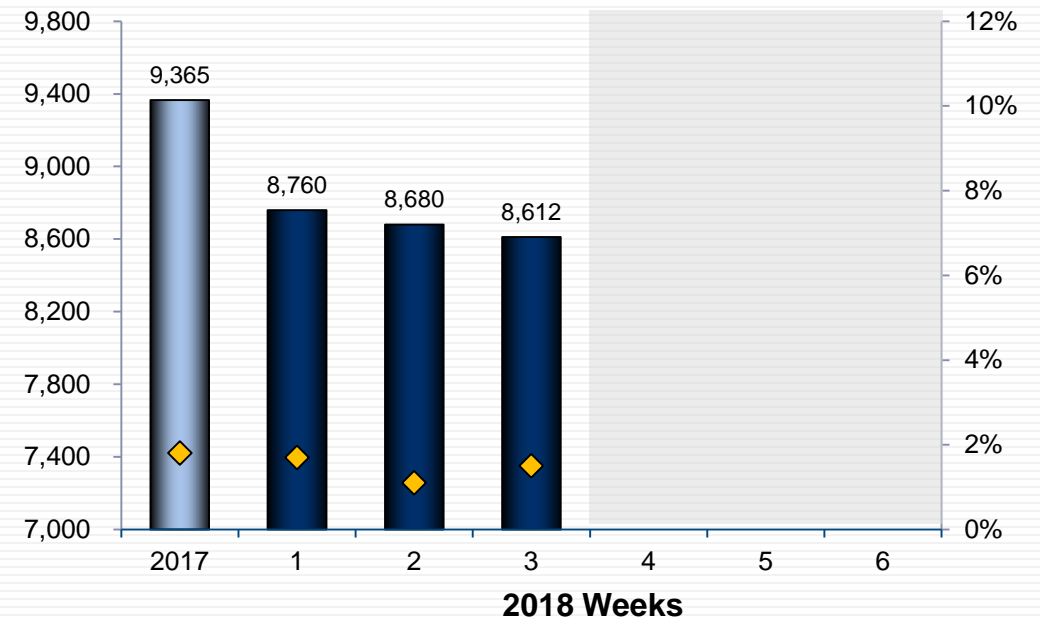

Resourcing appropriately to meet business needs

Active Locomotives

Train & Engine Headcount and Re-crew Rate¹

- Locomotive level coming down in concert with network velocity improvement

- Recent headcount decline driven by train staffing efficiency and adjustments to extra boards

Power and crew availability steady at approximately 99% and 95%, respectively

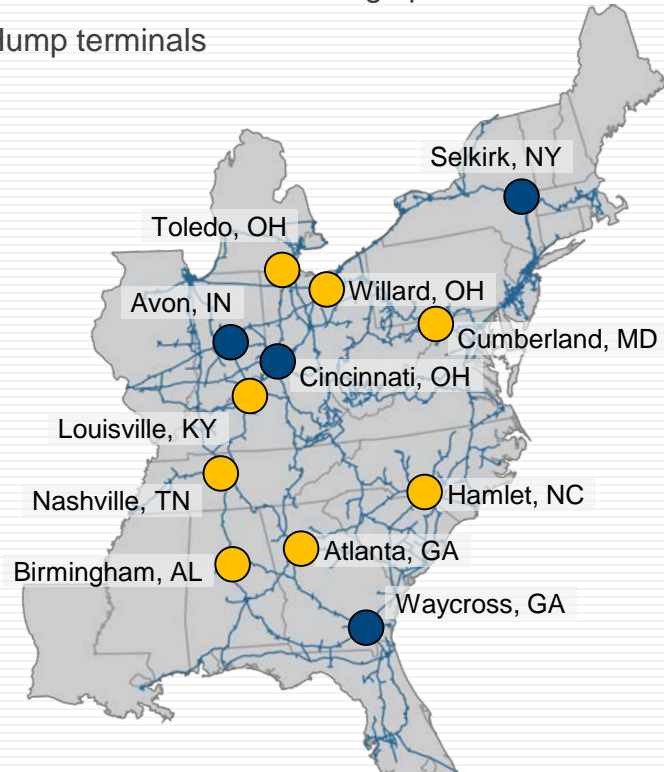

¹ Re-crew rate is re-crew people starts as a percent of total measured people starts, and represents incidences of replacing a crew on the same train ID (generally due to hours of service)

Hump yard performance steady

CSX Hump Terminal Overview

- Transitioned to flat-switching operations
- Hump terminals

Absolute number of humps not “good” or “bad”; goal is best mix of hump and flat yards for processing efficiency

- Key hump productivity and efficiency measures performing well
- Total hump yard volumes back to normal levels after holiday, remain well below capacity of yards

Dwell at Hump Terminals¹

¹ Dwell displayed according to CSX methodology; explanation of CSX methodology can be found at csx.com/servicemetrics. 2017 dwell excludes the Hurricane Irma-impacted period for terminals that held cars through the storm.

Western terminals performing well

Western Corridor Key Terminals

● Key Western terminals

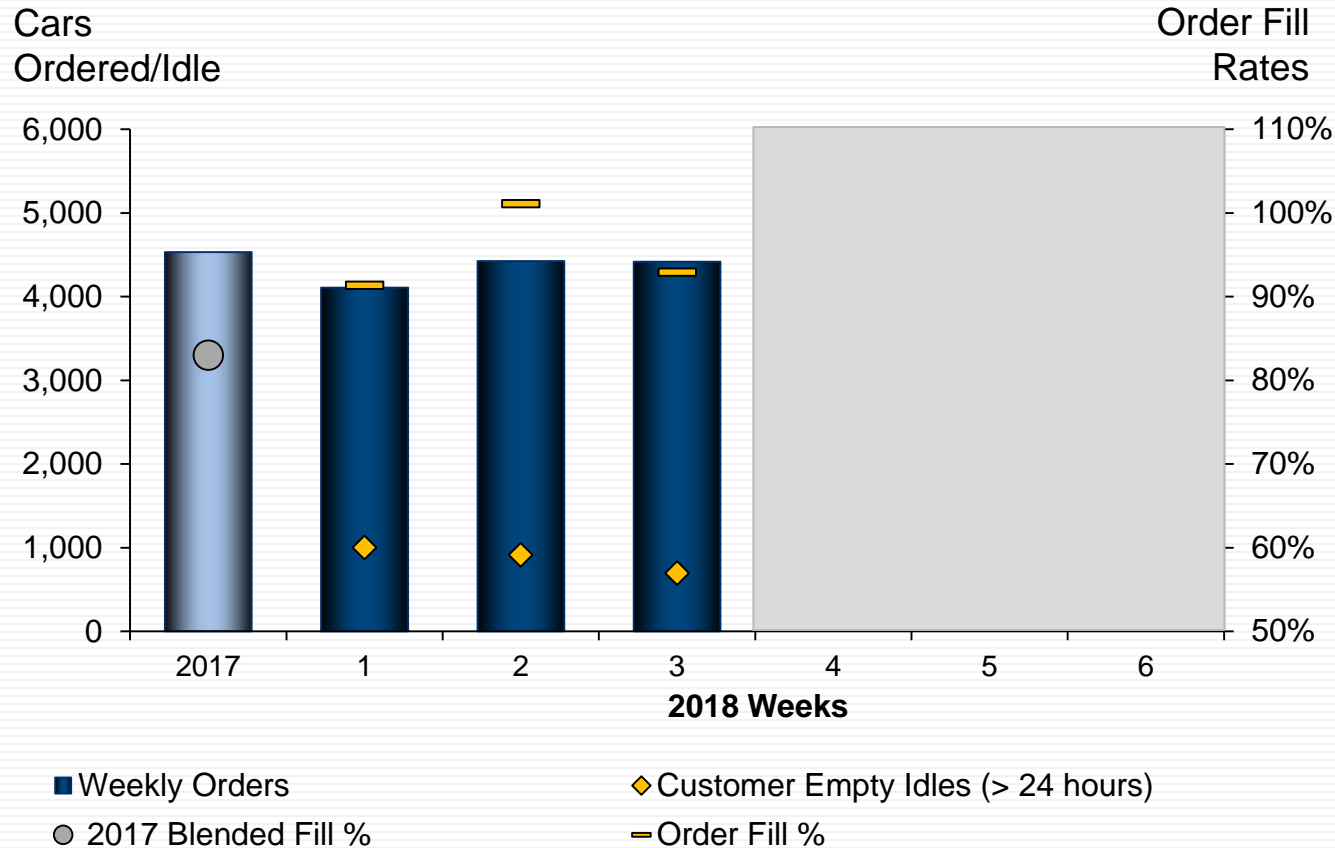

- Key terminal productivity and performance measures healthy, dwell remains well below 2017

Dwell at Western Terminals¹

Car fulfillment settled higher, averaging 97% year-to-date

Weekly Car Orders, Customer Empty Idles, and Fill Rate¹

- Over 300 orders filled in week 3 against week 2 open orders, increasing fill to 101%
 - Car flows fully recovered following holiday
- Empty car dwell remains elevated at customer locations
 - Empty idle cars at a given customer held >24 hours considered available to fill that customer's orders

¹ 2017 orders and fill rate normalized for Weeks 14-44 against historical/expected order levels (Q1 2017), as orders were disconnected with demand; starting week 45, improved process leaves orders open for two weeks, counts empty idle cars > 24 hours at a customer location as a filled order for that day

Last mile performance measure stable

Local Service Measurement¹

- Local Service Measurement (LSM) is not a primary metric that CSX uses to manage its operation
 - In scheduled railroading, focus on end-to-end transit and customer expectations
- However, reliable pull and place expected as part of service to customers

Customer problem logs remained at normal levels

Customer Inquiries Daily Average Log Volume

570 Total Logs in Week 30 2017
at height of service challenges

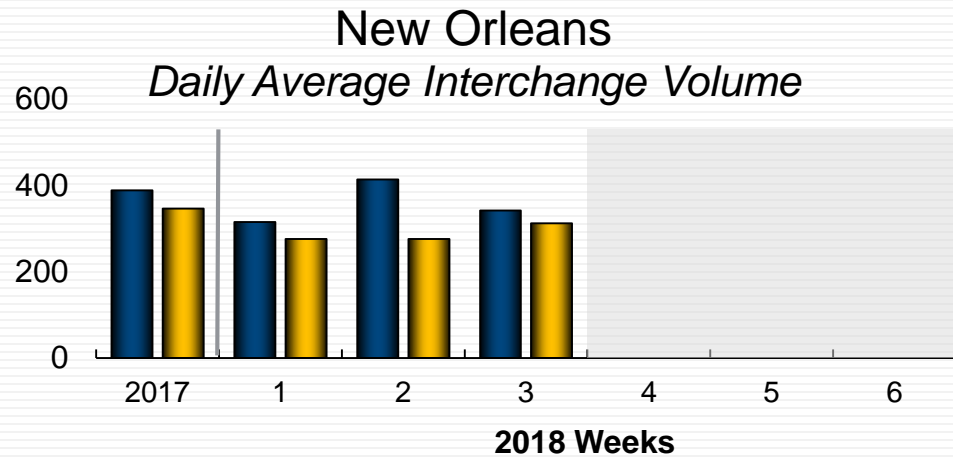

- Improved communication allowing for faster, more local resolution
 - Accountability for resolution of customer issues resides with field responsibility
 - Escalating and resolving critical issues with senior leadership
- Enhancing key customer tools and aligning workstreams to allow for easier, more direct connections

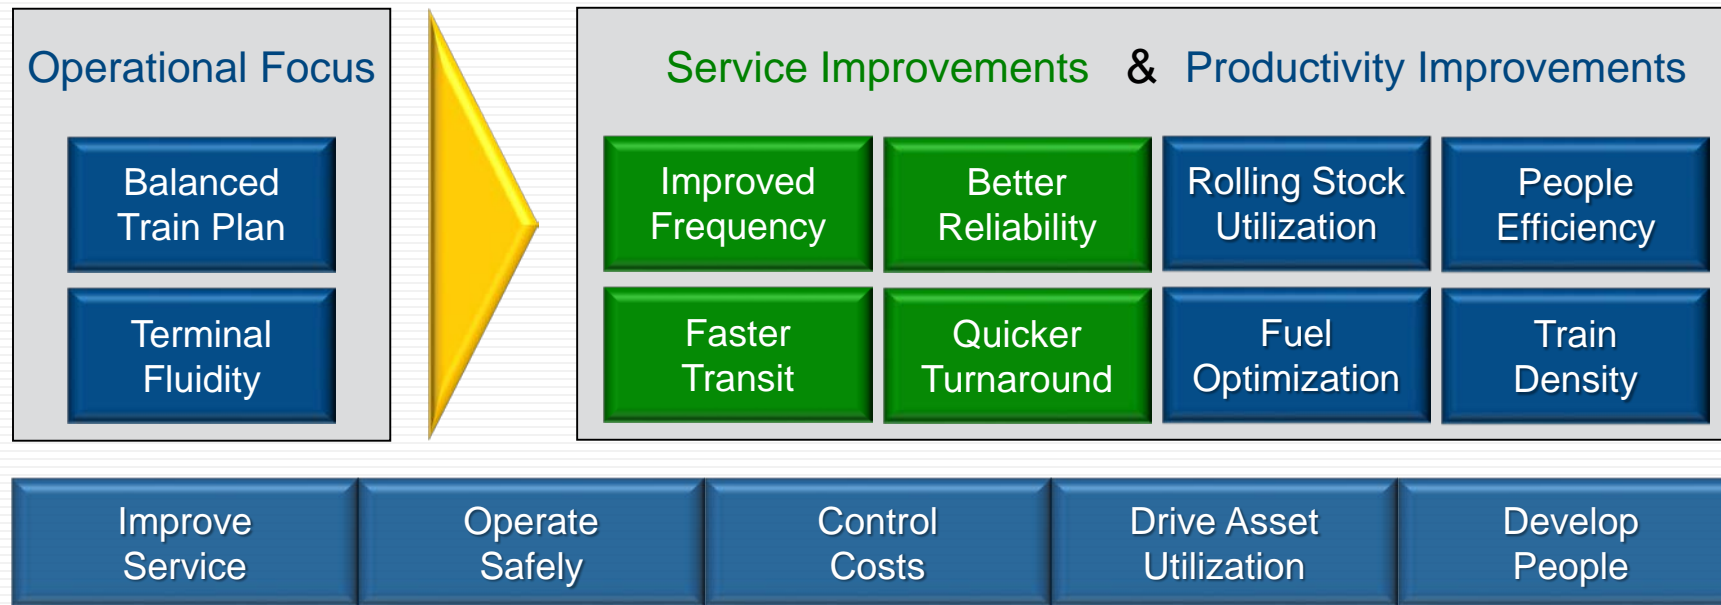

Interchanges current and performing to expectations

■ From ■ To

Scheduled railroading producing service improvement

- Accomplishments in 2017: realigned service frequency, balanced train plan, improved terminal efficiency
- Improved execution on this foundation to drive long-term service and productivity improvements
