Buffalo area, up to 25 percent from Canada and that includes NS that has a couple of trains into and out of Canada as well and this is going to continue to grow.

We are happy to hear today that CSXT will be looking at infrastructure changes to handle additional growth. The belt line today is the only access for Canadian railroads to enter Buffalo. Obviously CP operates from Niagara Falls and CN comes through over the Fort Erie gateway and you come to a common point on the belt line which I will show in a schematic here shortly.

The belt line is a congested piece of railroad. When you look at access to and from Frontier Yard and crossing at the CP Draw, we believe that they are major contributors to the bottleneck in the Buffalo area. What I'm saying is the piece of track, not only on the belt line right where the two railroads converge but the piece of track on entry to and exit from the Frontier Yard as well as to the draw where CN does operate traffic beyond the
draw, it is one piece of congested railroad and it's going to continue to be with the traffic growths that we are forecasting and I'm sure our competitive brothers are also looking at some changes in that operation.

CN is limited in pursuing solutions to benefit Buffalo and New York shippers in expediting traffic. First of all, I think everyone should understand that Canadian National, the main interchange point in Buffalo is with CSXT. When we closed the Fort Erie Yard, CSXT's Frontier Yard, at that time Conrail, became the main interchange points with all carriers for Canadian National. Subsequently there were several agreements that were struck which helped improve the situation somewhat and I say somewhat, in the Buffalo area, mainly when we merged or when the merger took place, we negotiated an arrangement with Norfolk Southern to operate bypass traffic to help the flow through the Buffalo gateway.

Our traffic today is moving. Our
interchange traffic is moving under restricted traffic rights. By that I mean there is traffic and the carrier specifics built into the agreements and we are going to talk about that a little.

Our inability to interchange with other carriers or Norfolk Southern and CSXT at more suitable locations is also contributing to what we consider to be a bottleneck and by that I mean, where you have a hump yard and where a major carrier has to deliver traffic to that hump yard, what you are looking at is basically a 24 hour delay going in and a 24 delay going out for that same traffic, for that same customer traffic. You are looking at about a 48 hour delay when we could, we could with our solution, deliver direct to these carriers.

Now, I'm going to -- I'm trying to figure out what we are going to do here. I could go up to the map and I will tell you what, I just had some laser vision and if I put this dot on the map I'm not sure where I'm
pointing so let me go up to the map and see if I can do this a little better.

Today I think you can all hear me, correct, today Canadian National operates all their trains over their lines from Canada, from Toronto to Chicago, all traffic over to a point called Fort Erie on the Canadian side. We access via the bridge which is the International Bridge and we operate to what I just mentioned was a common point with CP Rail who operates down from Niagara Falls, continue on through the belt. My point was that this area here is very congested. Today we are allowed under trackage rights, the heavy red lines if you will indicate our routing options that we negotiated or have by agreement to access the different carriers. Today we run bypass service down the Conrail compromise branch, bypassing the draw which was an effective move to deliver traffic to the Norfolk Southern Buffalo line and control point GJ. We are looking at more of that in our solution here shortly.
We are not allowed to access any other customers and when I say customers, any other railroads, in Buffalo unless we have an agreement. For example, if we were to want to deliver New York traffic to the southern tier to the Norfolk Southern, we do not have rights to operate on Ohio Street and what we are looking for are those rights. We don't have rights. We go right by the door to the Buffalo/Pittsburgh. We go right by the door of the South Buffalo C Station and we are not allowed to deliver traffic into those locations and for Buffalo and pittsburgh, all our traffic has to go into Frontier Yard, thus taking a 48 hour hit we are talking about and we will be looking at proposing that we are allowed to deliver at our option when we have sufficient traffic direct to the B and P Yards.

We are not looking for commercial accesses, we are just looking to better deliver traffic in the Buffalo area to expedite traffic and alleviate some of the
bottlenecking congestion that could occur, that will occur in the Frontier Yard.

At the same time there is another carrier, the Buffalo Southern Railroad. We go by that switch as well and we are not allowed to access and we would be looking for those access rights.

Infrastructure changes, when you talk about operating rights, there is very little money associated with delivering traffic in a more expeditious manner, no money at all. It's just what makes sense. But when you look at infrastructure, there is money that has to be spent and when you take a look at our preferred routing, saying that we only have one route over the belt, we would like a review of the Niagara branch. If you would put the map back up for me, what we are looking for is a review of an alternate routing. Today all traffic operates over the belt. We are looking at a study to be completed to examine an operation, putting in a connection to CPF and operating over the Niagara branch.
The Amtrak train operates that way today. We believe there is restricted clearance. We are going to have to take a look at exactly how severe those restricted clearances are but what that would allow us to do is eliminate some of the congestion here in the Frontier Yard area, would allow us to bypass the draw area, come over the compromise and deliver direct to Norfolk Southern at a control point GJ, to South Buffalo Railroad which we have access today to and any other traffic, any other destinations in this area, including Seneca Yard. We do not have an agreement to deliver to Seneca Yard and it might be an opportune time to take some of the traffic out of Frontier depending on the destinations and move it into Seneca Yard with that traffic.

We would like that study to take place and we believe it will greatly assist the flow of traffic through the Buffalo gateway and belt.

MR. TIMMONS: Mr. Sebesta, you are
at about 15 minutes.

MR. SEBESTA: I am winding up.

MR. TIMMONS: Thank you.

MR. SEBESTA: We are also looking for traffic rights over the Niagara branch that would allow us to have an alternate routing through the Niagara, New York to Niagara, Canada gateway. It will just be another routing to help alleviate some of our congestion in the Fort Erie area.

We are also looking at possible physical delivery to alternate locations or customer sidings. We are not looking for commercial access and I will give you an example, we are looking at taking a coal train, if you will, direct to Somerset over Niagara Falls but turn it over to CSXT. We don't need the commercial. We are not there to take over any of the commercial access but rather than put it through Frontier Yard, start delivering direct, including Kenmore, including the Ohio Street yards. We are talking unit trains, just the physical delivery as opposed to commercial
access.

We are looking at new plant improvements and crossovers and for that I think the railroad should be able to get together.

In summary, very quickly, CN has and will continue to have an important presence in the Buffalo gateway. We believe CN has a significant and positive contribution to make in resolving New York's bottleneck issues and I look forward to working with the customers and with the railroads to do so.

This next statement is not self-serving. It applies to all carriers. We believe that if CSX and NS in this particular case cannot provide service, shippers should have access to other carriers such as was ordered in the Houston emergency order and such that we have in the short line industry agreements and again not self-serving, it's just something that each carrier has to consider when they are not providing service.

The proposed remedies are good for the shippers and rail industry and the economy of
New York and our area of trade is going to continue to grow in the north/south corridors and north/south movement through the northeast United States and New York and we look forward to working with the railroads and seeing if we can resolve some of these issues.

Thank you.

MR. TIMMONS: Thank you, very much.

AES Energy, Gary Edwards.

MR. EDWARDS: Good morning and thank you. I believe the panel has received a copy of my comments previously submitted.

My name is Gary Edwards with AES Eastern Energy, AES Somerset and Somerset Railroad Corp.

On behalf of AES Eastern Energy which is comprised of AES Somerset, a CSX destination and AES Cayuga, AES Greenridge, AES Westover and AES Hickling, all Norfolk Southern destinations, I am here to present our comments and suggestions relative to NS and CSXT's performance subsequent to the division of Conrail between these two
class one carriers.

AES Eastern Energy receives large volumes of coal in both company owned and railroad supplied equipment unit trains. The cycle times we have experienced on our own equipment has not yet returned to the cycle times we consistently obtained under the former Conrail operations. This is particularly disturbing in that the size of our fleet was based on cycle times coupled with the annual coal consumption at each of the plants serviced by our equipment. When the class one carriers are unable to meet their cycle commitments previously provided, AES must then supplement its own equipment with railroad supplied cars which increases our cost of doing business. Although both carriers have failed to meet the operating standards of Conrail, the problem is more pronounced with NS.

Three of our operations receive unit coal trains of railroad supplied equipment and these deliveries are all so deficient...
relative to transit time today versus the Conrail operations.

Typically railroad supplied unit coal trains were loaded on Thursday for delivery to the plant prior to the start of day crew on Monday mornings. This scenario allowed for the unloading of each unit train within the allotted free time without incurring demurrage charges. Now, under NS operations, loaded trains are being delayed en route with some delays occurring in the Buffalo terminal area or as a result of congestion in the Buffalo area and these trains are not arriving until late in the day on Tuesday. If we move our loading day earlier in the week, we then are faced with the possibility of the trains arriving on Friday, resulting in our expending overtime through the weekend unloading the trains to avoid demurrage charges.

Besides the delays on the long haul portion of the movement, we have also experienced numerous delays in switching
at our facilities. Full unit trains may make the yard Gang Mills and a portion of the train spotted at our yard. However, the subsequent switch to spot the balance of the train is delayed, in some cases, by 24 to 48 hours. This is particularly troublesome when the delay then pushes our unloading operations into weekends, creating added labor costs. We have also seen numerous times when a switch of the yard has been promised and people have been brought in to unload cars, only to find the cars were not spotted. In some cases cars have not been placed for several days, again causing our operations undue delays and expenses.

It is apparent NS and CSXT continue to be plagued by crew and locomotive shortages. Numerous times we will expend additional effort to complete the unloading of a train, only to have it sit in our yard empty with the explanation that they are either looking for a crew or waiting for locomotive power to be assigned. These
empty train sets can sit in our yard from 24 to 48 hours or more at times.

We have also seen NS trains delayed in the Buffalo area due to the lack of crews to move them over the southern tier to Gang Mills. In some of these cases our unit trains were placed on sidings west of Buffalo and the power was pulled. Then when a crew was available, it seemed power was unavailable for the train and further delays resulted. In several cases, trains loaded one or two days after the original train actually passed a train still sitting on a siding awaiting power and crew.

This crew shortage has also impacted switching services to Hickling. This plant requires a daily switch to unload trains in a timely fashion. It has been the norm rather than the exception that there were no available local crews to provide a switch in the evening to Hickling, located approximately ten miles from Gang Mills Yard.

Besides the primary coal traffic
delivered by CSXT to AES Somerset, we also receive individual car shipments of anhydrous ammonia for use in one of our environmental compliance systems. This movement is a joint NS/CSXT movement with an NS origin and a CSXT destination. We have found the transit time for a loaded car is anywhere from three to four weeks at best. This lengthy transit time to us seems absurd in that the transit time for trucks delivering the same commodity from the same origin is 10 to 12 hours. In all fairness to both railroads, this move is a new move for us beginning after the split date. We therefore do not have a comparable Conrail performance to judge it against. However, the contrasting transit times between a truck move and a rail move suggests the rail transit time is excessive, thereby leaving a lot of room for improvement.

Finally NS's operations between Buffalo and Ashtabula continue to be slowed by congestion on this single main line track and congestion on the NS line between

DePaolo-Crosby Reporting Services, Inc.
197 Delaware Avenue, Buffalo, New York 14202
Ashtabula and Youngstown impacts both CSX destined unit coal trains as well as NS destined unit coal trains for AES. This route was pointed out as a choke point to NS and CSX as far as back as the original STB hearings on the division of Conrail.

In that NS is the owner of the Ashtabula line and is the railroad with the poor connection from train movement from the Pittsburgh Seam coal fields into the Buffalo area, I will say NS has not taken adequate measures to alleviate congestion on this route. Delays over this route directly impact both railroads and in particular, the operations of NS in the Buffalo area. If trains cannot efficiently operate over the route, they are likely backed up into the Buffalo area creating unneeded congestion in the Buffalo terminal or they are delayed in arriving at the Buffalo terminal, increasing the likelihood they could be delayed from delivery to the customer in the Buffalo area.

On numerous occasions we have provided
both CSXT and NS with suggestions to changes in their operations we felt would help improve the operating efficiency of both railroads and would like to take this opportunity to reiterate those suggestions.

The suggestion we believe could have the most positive impact on NS's overall congestion problems between Youngstown, Ohio and Buffalo and the Buffalo terminal would be the rerouting of traffic over the former Erie/Lackawanna line between approximately Hubbard, Ohio and Hornell, New York. This could eliminate delays occurring on the water level route at Ashtabula due to the lack of facilities to allow a progressive move from the Youngstown line east to Buffalo. Eliminating these delays could provide relief to congestion on this line for through traffic running between Buffalo and Cleveland and as a result help reduce the amount of trains backed up in the Buffalo terminal.

When this alternative has been
mentioned in the past, we have heard numerous
cuses why it would not work. Our contention,
however, is a train moving across this
alternative route at ten miles an hour would
likely reach Gang Mills sooner than being
tied up in the congestion on the water level
route in the Buffalo terminal. Rerouting of
AES destined trains alone would take 320
trains annually out of the Buffalo terminal
area, allowing additional capacity for existing
traffic as well as capacity for new traffic.

Our next suggestion, again for NS, is
the installation of a siding at our Cayuga
facility to accommodate the storage of two
to three locomotives while we unload the unit
coil trains. Currently the crews are running
light back to Ithaca Yard with the locomotives
once the train has been spotted in our yard.
The run is approximately 14 miles and could
be considered unproductive time for a train
crew. By needing to run back into Ithaca
with the power, this move also interferes with
service by the local crew to another customer.
on the line, Cargill. With the siding at Cayuga once the loaded train is spotted, the crew could simply put the power in the siding and taxi back to Gang Mills. Upon release of the empty train, a crew would be taxied to Cayuga, tie on the train for the run back to Gang Mills, thereby allowing the crew more time to actually move a train versus running light power back and forth to Ithaca.

For CSXT, we would suggest the practice of leaving locomotives at Somerset, once a loaded train is delivered, become routine instead of the exception. CSXT could make the necessary arrangements to have rear-end markers charged and the power serviced at our facility ready to run back to Newell Yard in Pennsylvania once we have completed unloading operations. This would at least eliminate the need to wait for locomotives when empties are made available, reducing delays to our unit train cycle times. This would also improve track capacity in the Buffalo terminal area which is reduced when
you operate light power back and forth between Somerset and Frontier Yard.

We also would like to ask CSXT to investigate the possibility of a long-haul crew to run between Somerset and Ashtabula. This would reduce the overall number of crews required to move the unit train between the mine and the plant and would eliminate the need for a re-crew at Buffalo. Running time between Ashtabula and Buffalo and the Buffalo and Somerset would indicate a single crew could make this move without violation of the hours of service law. This type of move could add significantly to the improvement in the cycle times for our unit trains.

I would like to add some additional comments as brought up by Mr. Coan, the issue of movements within the Buffalo area and pricing. AES Somerset was the industry that recently saw a major increase in pricing for movement of limestone out of Buffalo to Somerset. We were under the impression this split of Conrail between NS and CSX would
provide better, more economic rail service to the area, where we have found it is actually done the other way, seeing over a 50 percent increase in that move of stone from Buffalo to Somerset and thereby pushing over 160,000 ton of stone onto trucks each year. We have begun trucking that stone right now and hopefully in the future we can readdress that and maybe get that commodity back to rail.

Thank you for your time. I appreciate your interest.

MR. TIMMONS: Thank you, Mr. Edwards.

Pat Sabatino, South Buffalo Railway Company.

MR. SABATINO: Good morning. My name is Patrick A. Sabatino. I am Vice President, Business Development for the South Buffalo Railway Company, one of 12 transportation companies which are wholly owned subsidiaries of Bethlehem Steel Corporation.

Established in 1899, the South Buffalo Railway is a switching and terminal railroad operating in Buffalo, Lackawanna, Hamburg and...
Blasdell, New York. We have approximately 100 employees represented by four unions, 60 miles of track and we handle over 60,000 carloads per year. This South Buffalo is by most measures the largest short line railroad in the State of New York.

The South Buffalo Railway interchanges with Canadian National, Canadian Pacific, CSXT, Norfolk Southern and the Buffalo and Pittsburgh Railroad.

The infrastructure problems that exist in the Buffalo area are a result of the following: Before Conrail was created, most of the rail infrastructure in the Buffalo area was controlled by three of Conrail's predecessor carriers, with much duplication of facilities. During its years of operation, Conrail removed much of the duplication in an effort to streamline operations. When Conrail was split, the remaining facilities were allocated between CSXT and NS, with the majority going to CSXT.

NS has recently made efforts to add
infrastructure, such as rehabilitating the B & P Yard and reopening Bison Yard. However, because they each have only a portion of the former Conrail infrastructure, neither CSXT nor NS are experiencing the operating efficiencies that Conrail enjoyed.

The solution is not to create a shared asset area that would be controlled by the major carriers. The solution is to place the now fragmented infrastructure under the control of a single operator through trackage rights, lease or other initiative. The operator could then realize the efficiencies that Conrail once experienced. This operator should be a neutral switching and terminal operator that would serve as the pickup and delivery carrier for all railroads in the Buffalo area, in addition to shuttling cars between yards and preparing outbound trains for other railroads serving the area. This solution would improve service and significantly reduce the need and cost for duplicate facilities. As a neutral switching
and terminal operator, the South Buffalo Railway could be this solution.

The South Buffalo Railway solution could encompass the entire Buffalo area or various selected yards and facilities. For instance, if this solution were applied to Seneca Yard where four class one railroads could converge, the South Buffalo Railway could classify, assemble and prepare outbound trains for all the railroads, including preparation and bridging of transfer blocks for movement within the Buffalo area.

In conclusion, the South Buffalo Railway is the private sector solution to the inherent long-term problems related to existing utilization and operation of railroad infrastructure in the Western New York region.

The South Buffalo Railway is a neutral switching and terminal operator that currently serves the area with a proven safety record and over 100 years of experience in the industry and the area. And we have the operating and financial resources to
successfully implement the solution.

The South Buffalo Railway could provide the local service to rail customers in the Buffalo area on trackage rights granted by the class ones, shuttling rail cars among the major classification yards and serving customers throughout the area with flexible scheduling not always available through a class one operation.

Thank you for your time.

MR. TIMMONS: Thank you, Mr. Sabatino. Councilmember Charley Fisher, are you here with us? This is the Buffalo Common Council.

(No response.)

Mr. Bob Godwin, President of Locomotive Engineers, CSXT.

MR. GODWIN: My name is Robert Godwin. I am the General Chairman of the Brotherhood of Locomotive Engineers for the former Conrail Locomotive Engineers on the CSX northern district, including Western New York. I have been in this position for 17...
years and I started my rail career on the Erie Railroad in 1957 in Buffalo.

During these years, I have been involved in six mergers and/or consolidations, starting with the Erie-DL&W merger in 1960 to the split up of Conrail by Norfolk Southern and CSX in 1999.

During the first year after any merger or consolidation, there are problems for the railroad, both management and the employees, and for the customers and the shippers. Those problems are usually solved usually by mutual cooperation between management and the employees of the railroad and the shippers.

In the northern region of CSX which includes the entire State of New York, we had problems for the first six months; delays, lack of locomotive power and rail cars and gridlock in the rail yards. In the last seven months, the northern region from Boston and New Jersey to Cleveland and to Chicago and Saint Louis, the trains are running on time. The yards have dropped their dwell time down to between 20 and
25 hours and the industrial crews are on time pulling and placing cars in the industry. In fact, today the CSX Buffalo terminal has surpassed the best Conrail service.

The CSX facilities in Western New York are capable of handling the business it has today. CSX has five yards in Western New York: Frontier Yard, Seneca Yard, Kenmore, Niagara, Ohio Street and the stockyards.

The Frontier Yard is a classification yard with 63 classification tracks, three main tracks and 22 inbound/outbound running tracks. It also has a car shop with five tracks and an engine house with six tracks.

Seneca Yard is in Lackawanna and has three receiving tracks and a class yard with 17 tracks. There are two satellite yards, the 100 Yard with five tracks and the 200 Yard with seven tracks. Seneca Yard handles cars for the Ford Plant, the South Buffalo Railroad and Bethlehem Steel.

The Kenmore Yard is located on the northern side of Buffalo bordering Kenmore and
it is off the Niagara branch. It has 27 tracks and it has a satellite yard, BG&E Yard with five tracks. Kenmore Yard services American Axle, Chevrolet Tonawanda, Dunlop, Niagara Mohawk and numerous other shippers.

Ohio Street Yard has a middle yard with 16 classification tracks and services the flour mills and other shippers.

Niagara Yard has 36 classification tracks, a Hold Yard with eight tracks, a car shop with two tracks, an engine house with three tracks and it services all the industries located on CSX tracks and it is also an interchange point with the Canadian railroads.

The stockyard is a Trail Van Facility and services Federal Bakers and Delaware Paper and Trans-Flo Facility. It is behind the major US Post Office and very close to the Western New York UPS facility. It is also in close proximity to Frontier Yard.

As I stated, the CSX has the infrastructure to handle the business today. If the business grows, CSX has the ability and
the property to expand their facilities in Western New York to handle the business in New York or the new business in Buffalo.

CSX has problems, as any railroad has after a merger or consolidation. However, the problems are not on the northern or western region, the areas where the former Conrail employees work.

It is a fact that the Albany Division from Boston to Cleveland are number one in every category of how CSX defines how the railroad is running. I am personally very proud of my former Conrail rank and file brothers and sisters from all the crafts who are leading the CSXT out of the split-up of the Conrail doldrums and they are professionals and they show this every day.

I also congratulate CSX Vice President Bob Downing and General Manager Jim Decker and their staff for the steadfast position to give our customers the best service possible.

The employees and management of CSX on the northeast region will work together to
give our customers, the shippers, the best service we can. We did it on Conrail and we can do it again on CSX. That's a promise.

Thank you, very much.

MR. TIMMONS: Thank you, Mr. Godwin.

Mr. Ron Hayes. Are you here today?

UNIDENTIFIED VOICE: Mr. Ron Hayes is going to represent Jack Quinn's office.

MR. HAYES: Good morning, gentlemen. Congressman is in Washington this morning and asked that I present his statement on his behalf.

I would like to thank Norfolk Southern Corporation and CSX Transportation for holding this conference as a listening session to receive information on infrastructure modifications that might improve rail service for Buffalo and Western New York.

NS and CSX are to be commended for their efforts to recover from the system-wide congestion problems which resulted from the acquisition of Conrail. I believe that your outreach to the local rail user community and
willingness to address their needs are responsible for this recovery. I look forward to this conference on infrastructure providing a mechanism for a similar impact on infrastructure investments.

In May I wrote to Surface Transportation Board Chairman Linda Morgan to request that NS and CSX solicit outside input on the infrastructure needs of rail users in Buffalo and Western New York. The STB has provided significant regulatory oversight of the Conrail acquisition and their commitment to improving service to Buffalo area shippers is in large part responsible for service improvements.

The STB recognizes that the Buffalo area is served by the Canadian Railroads and several short lines. There is also a large and diverse group of railroad shippers and receivers in the region. Each of these interested parties have different ideas and priorities in regard to the infrastructure and capacity requirements in the Buffalo area.
The STB proceeding which called for this meeting requires NS and CSX to further assess existing rail infrastructure needs and to more fully develop proposals for related infrastructure improvements in the Buffalo region.

It is the objective of the STB to develop a coordinated plan for improving the area infrastructure. The STB has referred to similar efforts in Houston, Texas where UP/SP was directed to meet with shippers, involved railroads and other interested parties to upgrade the Houston terminal where service problems would not be resolved in the long term until infrastructure was addressed in a meaningful way.

The public and the STB are aware of the NS and CSX intensive efforts to return freight rail service to pre-Conrail levels and to address the price issue. I am calling on NS and CSX to utilize this STB proceeding to address inherent long-term problems related to existing railroad infrastructure and capacity.
in the Western New York region.

The extensive infrastructure improvements required in the region cannot be the responsibility of NS and CSX alone. I have worked with Governor George Pataki and the United States Department of Transportation Secretary Rodney Slater in an attempt to obtain funding for railroad infrastructure projects in the Buffalo area. I believe that we will be able to secure state and federal funding for certain projects. However, these projects need to be identified and prioritized. It is important that the public have input into the prioritization of infrastructure investment.

One key local infrastructure investment considered a high priority by many in the rail community is the construction of a second bridge at control point draw CP Draw and the associated rail rationalization required at the site. However, the questions tied to the cost and feasibility of a second bridge at CP Draw has placed this infrastructure investment
on the back burner.

This community cannot allow inaction at CP Draw to stall other important infrastructure investments. I anticipate that the members of the rail community that have brought specific improvements to my attention will utilize this proceeding to bring these needs to the attention of NS and CSX and that they will be properly addressed.

Briefly for the record, I am requesting that both NS and CSX evaluate as required by the STB: The use of the Buffalo and Pittsburgh rail line which may soon be abandoned; the implementation of all infrastructure investments committed to by NS and CSX as part of the acquisition proceeding; priority improvements detailed by Niagara County and Erie County, as well as specific recommendations highlighted at this morning's conference.

I want to thank NS and CSX for giving the rail users community an opportunity to voice their concerns about the present rail
infrastructure situation as it relates to service and future economic development in upstate New York.

I look forward to reviewing the report to the Surface Transportation Board and anticipate NS and CSX incorporating these local proposals into their future plans for infrastructure improvements in Buffalo and Western New York.

Thank you.

MR. TIMMONS: Thank you, Mr. Hayes. We appreciate that.

That completes those who requested to make remarks. The sign-up sheet at the back of the room indicates we have three further presenters. I'm going to turn this over to my counterpart John Casellini to bring them forward.

MR. CASELLINI: Next up is Ken Swanekamp from the Erie County Department of Environmental Planning. Ken.

MR. SWANEKAMP: My name is Ken Swanekamp. I am the Director of Business
Assistance for Erie County Department of Environment and Planning. Besides being interested in economic development and the railroad issue, Erie County is also the owner of two short lines totaling 34 miles which release to the Erie County Industrial Development Agency and then have operators, DL&W and Buffalo Southern for those lines.

Erie County would like to thank CSX Transportation and Norfolk Southern Railroads for this opportunity to address the infrastructure needs of Erie County and Western New York's rail system. As you know, Buffalo and Erie County have been one of the largest rail centers in the United States for the past century. Many of our current industries rely on rail to move their raw materials and finished goods. The livelihood of these industries, the employment and wealth that they bring to Erie County and Western New York are impacted by the level of rail service and the cost of rail service.
There has been much discussion about infrastructure issues such as a new bridge at CP Draw or yard improvements for NS and CSX. There has also been requests for public funds to help implement these projects.

At the same time there are continuing issues of service problems for local companies and although improvements appear to have been made in many areas, many shippers have made it clear that levels of service are not yet at Conrail levels. The issue of cost to shippers and switching rates continues to be of concern to the region and is why we continue to push on that issue.

Erie County considers their railroads to be partners in economic development activity and important employers in their own right. Before Erie County assists or endorses the public assistance of the rail infrastructure, we want to be sure that our number one goal of protecting existing companies and their employment base and creating new employment in the county and region is addressed.
We are not anxious to use public funds to simply move product from Chicago to New York faster without any benefit to the region. We also want to be sure that the railroads are contributing to the costs associated with these projects.

Erie County has been involved in discussions with railroads regarding new facilities in Erie County which will result in new investment by other companies, whether for translating facilities or new manufacturers. Both CSX and NS have indicated that a lack of sites for new business is a problem when it comes to developing new rail using customers. We want to continue those discussions and plans as partners. We also endorse the Erie/Niagara Rail Steering Committee recommendations for an objective rail network study to assess the region's infrastructure needs.

Such a study could help determine the most effective use of public funds for rail improvements.
Again we thank CSX, Norfolk Southern and the Surface Transportation Board for the opportunity to make these comments.

MR. CASELLINI: Thank you very much, Ken.

Next on the sign-up list, Hal Norris from the Greater Buffalo Niagara Regional Transportation Council.

(No response.)

Okay and the last speaker that we have on our list here is Donald Rychnowski from the Southern Tier West Regional Planning and Development Board.

MR. RYCHNOWSKI: I am here to make two primary points relating to service and operations in the Buffalo, New York area.

First, infrastructure improvements and operating changes relating to Norfolk Southern's southern tier extension line would positively impact the ability of Norfolk Southern to provide better service in and around the Buffalo area.

Second, Norfolk Southern should develop
a comprehensive response involving both
infrastructure and operations that will reduce
the safety and emergency vehicle access
concerns in the City of Dunkirk in Chautauqua
County.

As to the first point, the southern tier
extension should be seen as an alternative to
congestion and shipping volume problems in the
Buffalo region. Through traffic that currently
passes east/west through Buffalo but which does
not have to pass through Buffalo could be
shipped on the southern tier extension,
avoiding Buffalo. This would reduce the traffic
volume in Buffalo, reduce congestion in
Buffalo, and consequently improve Norfolk
Southern's ability to serve Buffalo area
shippers.

To accomplish this, Norfolk Southern could
run from Erie, Pennsylvania using its trackage
rights over the Allegheny and Eastern to Corry,
Pennsylvania, whereupon Norfolk Southern could
run on the southern tier extension to Hornell,
New York, connecting with the southern tier
line. This would have added side benefits to providing service to a number of prospective shippers in Northwestern Pennsylvania and Southwestern New York which is where my concern lies.

Norfolk Southern also has a yard in Olean, New York on the southern tier extension, with north/south connections to Buffalo through the New York-Keating, PA line. There also should be operating advantages to this additional connection to Buffalo that could be of benefit to Buffalo region shippers.

To accomplish this, in June of 1998 Norfolk Southern entered into an agreement with New York State and the Southern Tier West Regional Planning and Development Board in this matter. Southern Tier West was acting as an agent for the four counties in New York State in which the southern tier extension is located. This agreement provided for the provision of real estate tax abatements in return for certain service commitments by Norfolk Southern. In June of this year, New
York State Legislature created a railroad authority to implement the agreement.

Reopening the entire southern tier extension, making necessary improvements and repairs and upgrades and operating on the entire line either by Norfolk Southern or by a designated short line railroad, would benefit the system as a whole as well as the shippers along the southern tier extension. We request that Norfolk Southern implement this agreement and we in the southern tier stand ready to assist Norfolk Southern in this regard.

As to the second point, the Buffalo region includes the City of Dunkirk to the southwest of the city. The number of Norfolk Southern trains in Dunkirk has increased over the past year, posing a safety issue to pedestrians and automobile traffic owing to Norfolk Southern's grade crossings, numerous grade crossings in the city. This has resulted in traffic queues and flow problems and the potential for disrupted emergency vehicle service. Norfolk Southern has proposed
eliminating these grade crossings by truncating the city streets so that they do not cross the rail line.

This poses an even greater traffic and safety problem and does not address the issue of pedestrian safety. Thus far, Norfolk Southern has agreed to place signage at city grade crossings and has promised to hold crossing safety classes. We request that Norfolk Southern develop a more permanent and comprehensive solution to this problem.

As a unit of government in Southwestern New York and as an advocate for rail transportation, Southern Tier West Regional Planning and Development Board offers its assistance with respect to rail issues that affect Western New York and Northwestern Pennsylvania.

Thank you for this opportunity.

MR. CASELLINI: Thank you, very much.

I believe that that ends the remarks that we have from speakers who had signed up either previous to today or at the sign-in sheet this
morning. Am I correct in that assumption?

Okay. Richard, are you here at this point?

MR. TIMMONS: Does anyone else have any other presentations or prepared remarks or impromptu remarks they would like to offer to the panel at this time?

(No response.)

Any comments or observations about what we have heard or what has taken place this morning?

(No response.)

The panel and the members from NS and CSX have nothing further. We want to thank you all for the time that you have taken to prepare your remarks and your materials and the time you have taken to travel to be here with us. We will take all of that material under advisement and study that in order to prepare for a report for the 7th of September. Thank you very much for your time and have a good day.

(PROCEEDINGS CONCLUDED.)

Statement of Congressman Jack Quinn
New York, 30th District

SURFACE TRANSPORTATION BOARD DECISION
STB Finance Docket No. 33388 (Sub-No.93)

BUFFALO AREA INFRASTRUCTURE

July 27, 2000

I would like to thank Norfolk Southern Corporation (NS) and CSX Transportation (CSX) for holding this conference as a "listening session" to receive information on infrastructure modifications that might improve service for Buffalo and Western New York.

Since the announcement of the NS/CSX acquisition of Conrail in early 1997, I have worked closely with impacted rail shippers, elected officials, development professionals, union officials, Class 1 and shortline railroads and the public to address the concerns generated by the acquisition. Working together we have attempted to attack head on each issue as it arose with the goal of providing Western New York with acceptable rail service at a reasonable price.

The economy of Western New York and more than 25,000 high paying jobs depend upon our success.

NS and CSX are to be commended for their efforts to recover from the system-wide congestion problems which resulted from the acquisition of Conrail. I believe that their outreach to the local rail user community and willingness to address their needs are responsible for this recovery. I look forward to this conference on infrastructure providing a mechanism for a similar result on infrastructure investments.

In May, I wrote to Surface Transportation Board (STB) Chairman Linda Morgan to request that NS and CSX solicit outside input on the infrastructure needs of rail users in Buffalo and Western New York. The STB has provided significant
regulatory oversight of the Conrail acquisition and their commitment to improving service for Buffalo area shippers is in large part responsible for service improvements.

The STB recognizes that the Buffalo area is served by the Canadian railroads and several shortlines. There is also a large and diverse group of railroad shippers and receivers in the region. Each of these interested parties have different ideas and priorities in regard to the infrastructure and capacity requirements in the Buffalo area.

The STB proceeding which called for this meeting requires NS and CSX to further assess existing rail infrastructure needs and to more fully develop proposals for related infrastructure improvements in the Buffalo region.

It is the objective of the STB to develop a coordinated plan for improving the area infrastructure. The STB has referred to similar efforts in Houston, Texas where UP/SP was directed to meet with shippers, involved railroads and other interested parties to upgrade Houston Terminal where service problems would not be resolved in the long term, "until infrastructure was addressed in a meaningful way."

The public and the STB are aware of the NS and CSX intensive efforts to return freight rail service to pre-Conrail levels and to address the price issue. I am calling on NS and CSX to utilize this STB proceeding to address inherent long-term problems related to existing railroad infrastructure and capacity in the Western New York region.

The extensive infrastructure improvements required in the region can not be the responsibility of NS and CSX alone. I have worked with Governor George Pataki and United States Department of Transportation Secretary Rodney Slater in an attempt to obtain funding for railroad infrastructure projects in the Buffalo area. I believe that we will be able to secure state and federal funding for certain projects. However, these projects need to be identified and prioritized. It is important that the public have input into the prioritization of infrastructure investment.

One key local infrastructure investment considered a high priority by many in the rail community is the construction of a second bridge at Control Point Draw (CP Draw) and the associated rail rationalization required at the site. However, the questions tied to the cost and feasibility of a second bridge at CP Draw has placed this infrastructure investment on the back burner.

This community can not allow inaction at CP Draw to stall other important infrastructure investments. I anticipate that the members of the rail community that have brought specific improvements to my attention will utilize this proceeding to bring these needs to the attention of NS and CSX and that they will be properly addressed.
Briefly for the record I am requesting that both NS and CSX evaluate as required by the STB: The use of the Buffalo and Pittsburgh rail line which may soon be abandoned; the implementation of all infrastructure investments committed to by NS and CSX as part of the acquisition proceeding; priority improvements detailed by Niagara County and Erie County, as well as, specific recommendations highlighted at this mornings conference.

I want to thank NS and CSX for giving the rail users community an opportunity to voice their concerns about the present rail infrastructure situation as it relates to service and future economic development in Upstate New York.

I look forward to reviewing the Report to the Surface Transportation Board and anticipate NS and CSX incorporating these local proposals into their future plans for infrastructure improvements in Buffalo and Western New York.
REQUESTS FROM BUFFALO SOUTHERN RAILROAD TO IMPROVE SMALL CUSTOMER SERVICE IN WNY

I. Support trackage rights from Waterboro to Jamestown and beyond, to allow direct service to Jamestown from Buffalo.

II. Provide three times a week pickup of unit train of gravel from Machias to Buffalo.

III. Transfer Abby Street Yard, if unused, to the E.C.I.D.A. to better serve Buffalo Color and other small customers in that area.

IV. Support Buffalo Southern Railroad siding into Ravenwood/Georgia Pacific area in Hamburg to relieve traffic off of Norfolk Southern mainline.

V. Help co-market new aggregate and bulk storage and transload facility in Hamburg.
My name is Samuel M. Ferraro. I am the Commissioner of Niagara County's Department of Planning, Development & Tourism. I appreciate the opportunity to be here today to address issues regarding railroad infrastructure needs in Niagara County.

Before I begin, I wish to acknowledge the hard work by the Erie County Industrial Development Agency (ECIDA) in bringing our region together on railroad issues. The ECIDA has acted in a completely unbiased capacity regarding rail problems, whereby, I strongly endorse the comments made today by the ECIDA. Please note Niagara County has been working closely with the ECIDA as a member of the Erie/Niagara/Rail Steering Committee. Our work has focused on rail service and infrastructure projects that we hope will be addressed as a result of this meeting today.

The purpose of my remarks today deals directly with infrastructure needs in Niagara County. In December 1999, our department prepared a report outlining railroad needs in Niagara County. Specifically, the report is a comprehensive priority list of railroad bridges and railroad crossing throughout the County, including cost estimates. The report was presented to our federal, state and local representatives, as well as railroads.

Subsequent to the release of the report, we were asked to prioritize the rail projects by community in Niagara County. The priority list includes nine projects totaling $5,332,000. These projects represent the highest priority rail projects in Niagara County. On February 1, 2000 the Niagara County Legislature adopted a resolution supporting these projects as well.

The Niagara County report and priority list of rail projects are attached to my statement for your information.

Please be advised, there are currently some 80 major businesses in Niagara County that rely on some form of rail transportation for their economic existence and competitiveness. We are also working with new businesses that may need some form of rail service for their transportation needs.

Specifically, the Niagara Falls, New York area is home to many chemical industries, such as Occidental Chemical, Olin and DuPont that are heavily dependent upon rail service. Delphi Harrison Thermal Systems, located in Lockport, New York...
employs 6,100 people, and through rail service, supplies components for General Motors and the automotive industry. Delphi is the largest employer in Niagara County and Western New York. Additionally, the new AES Corporation power generating station in Somerset, New York, (formerly known as New York State Electric and Gas, NYSEG), is heavily dependent on coal shipments via the southern United States.

These and other companies require modern infrastructure that allows the best movement of goods and services possible in the region.

The emphasis on improved transportation infrastructure must be underscored and its affect on our area’s economy. Our local economy has suffered greatly from population and job loss. Further hindrance toward the ability to move goods will only add to this decline, locally and in the region. Following trends of the last several decades, the population of Niagara County declined by 6,598 persons, or 2.9% between 1980 and 1990. The 1990 County population figure of 220,756 persons represents a decline of 6.3% from the 1970 figure of 235,720. This decline in population mirrors the significant loss of industry in the County. Further, the unemployment rate in Niagara County as reported in June 1999 was 5.8% as compared to the New York State unemployment rate of 5.2% in June 1999, and a national unemployment rate of 4.3% in June 1999. (Source: NYS Department of Labor and US Department of Labor – Bureau of Labor Statistics).

On behalf of Niagara County Planning, Development & Tourism, we request your support of these necessary rail projects. We urge the railroad representatives here today to analyze these projects and work with Niagara County and its local communities to begin scheduling these priorities for implementation.

Thank you.

Samuel M. Ferraro
Commissioner
Niagara County Planning, Development & Tourism
WHEREAS, there are a number of rail infrastructure needs in Niagara County, and

WHEREAS, these needs are specifically identified as railroad, bridge, overpass and rail crossings, and

WHEREAS, Governor George E. Pataki’s proposed 2000-2001 budget recommends funding be set aside to improve said infrastructure needs in New York State, and

WHEREAS, the Niagara County Department of Planning, Development & Tourism, through its Local Government Outreach Program, has reached out to Niagara County’s communities having significant rail priority projects, and

WHEREAS, those said communities have identified their top projects, now, therefore, be it

RESOLVED, that the Niagara County Legislature go on record in support of the attached list of Niagara County rail infrastructure projects in the amount of $5,332,000, and be it further

RESOLVED, that the Niagara County Legislature recommends that Governor George Pataki set aside $5,332,000 million of his said set aside funds for the Niagara County Rail Infrastructure projects, and be it further

RESOLVED, that the Niagara County Legislature recommend that each community that has identified rail infrastructure projects on the attached list adopt a similar resolution of support, and be it further

RESOLVED, that copies of this resolution be sent to New York State Governor George E. Pataki; New York State Senator George Maziarz; New York State Assemblyman Robert A. Daly; New York State Assemblyman David Seaman; John F. Guinan, Assistant Commissioner, Office of Passenger & Freight Transportation; Richard P. Mullaney, Clerk, City of Lockport; Cynthia Baxter, Clerk, City of Niagara Falls; Michael D. Cox, Clerk, City of North Tonawanda; Lou Ann Murawski, Clerk, City of Cambria; Carol J. Brandon, Clerk, Town of Lewiston; Nancy A. Brooks, Clerk, Town of Lockport; Carol J. Genet, Clerk, Town of Royalton; De Ette S. Ferchen, Clerk, Town of Wheatfield and Rebecca Schweigert, Clerk-Treasurer, Village of Middleport.

MEMORANDUM

TO: Members of the Western New York United States Congressional Delegation
FROM: Samuel M. Ferraro, Commissioner
        Niagara County Planning, Development & Tourism
DATE: November 9, 1999
RE: NIAGARA COUNTY RAILROAD INFRASTRUCTURE PRIORITIES & COST ESTIMATES

We appreciate the opportunity to present the following report prepared by the Niagara County Department of Planning, Development & Tourism regarding railroad infrastructure priorities and cost estimates. This is a follow-up to the first report released by this department on October 18, 1999, highlighting overall rail infrastructure needs in Niagara County.

Included in this report is a comprehensive priority list of railroad bridges and railroad crossings throughout Niagara County, including cost estimates. This information was provided by local municipalities in Niagara County.

The report is divided into six sections and are as follows:

1. October 20, 1999 Niagara County Department of Planning letter sent to municipalities in Niagara County requesting priority rail bridges and crossings, and to identify related cost estimates.
2. List of nine municipalities and officials in Niagara County who received the October 20, 1999 letter.
3. Niagara County Cities – with responses on rail priorities/costs.
4. Niagara County Towns – with responses on rail priorities/costs.
5. Niagara County Villages – with responses on rail priorities/costs.
6. Recent letters from Linda Morgan, Chairperson, Surface Transportation Board (dated November 5, 1999), and copies of news articles regarding efforts to promote infrastructure funding.

We appreciate the opportunity to present this information on rail infrastructure priorities and costs in Niagara County, New York.

Thank you.

SMF:kja
OCTOBER 20, 1999 LETTER TO
NIAGARA COUNTY MUNICIPALITIES –
RAILROAD PRIORITIES AND COST
ESTIMATES
October 20, 1999

Dear «Title» «LastName»:

I would like to take this opportunity to thank you for submitting the recent information on railroad bridge and railroad crossing needs for your community. Enclosed is the report I submitted on your behalf to our Western New York Congressional Delegation and the railroads on Monday, October 18, 1999 (see attached article).

I have been now asked to coordinate the next step, which is to ask you for specific numbered priorities and cost estimates for the rail bridges and/or crossings you submitted. I realize this is more work, but the benefits could be tremendous. The railroads will be asked to support infrastructure improvements in our County, based on your response.

Therefore, I ask that you please review your community's submission and prioritize rail bridge and rail crossing needs. Further, I also request a cost estimate for proposed work on each bridge and each rail crossing. Please be sure to submit these as two separate lists.

In order to comply with our congressional offices and meet our timely schedule, I require a response no later than 5:00 p.m. on Friday, November 5, 1999. I apologize for the timeframe, but these schedules are beyond my control. I will do my best to package your response as part of a Niagara County submission again.

As always, if you require further assistance, please feel free to contact me at 439-7235.

Thank you for your continued cooperation.

Sincerely,

Samuel M. Ferraro
Commissioner
Niagara County Planning, Development & Tourism

SUBJECT: RAILROAD BRIDGE AND RAILROAD CROSSING INVENTORY  

Dear Mr. Ferraro:  

Per your letter dated October 20, 1999, attached please find a prioritized listing, with cost estimates, for alterations to railroad bridges and/or railroad crossings within the City of Niagara Falls.  

Be advised that these are rough estimates that will require revision during detailed design.  

Thank you for this opportunity to participate in the program. If there are any questions, please call me at your earliest convenience.  

Sincerely yours,  

Kevin P. O'Brien, P.E., City Engineer

▼ RUBBER SURFACE
▼ TIMBER SURFACE
At your direction, Mr. Dale Marshall and myself prepared cost estimates and a priority order for the railroad bridge and crossing inventory repair or removal recommendations we identified 14, October, 1999. We did so in response to the letter requesting specific information as requested by the Niagara County Department of Planning Development & Tourism in their letter to me of 20 October 1999.

BRIDGES

1. Location: Sweeney St. at foot of Oliver St.  
   Feature crossed: Erie Barge Canal/ Tonawanda Creek  
   Remarks: none.

2. Location: Sweeney St. at foot of Oliver St.  
   Feature crossed: Sweeney St. and Canalway Park.  
   Remarks: Clearance posted at 13’3” over truck route. Scupper drains missing. North side bridge approaches need cribbing to retain earth embankment.

   PRIORITY: HIGH  COST ESTIMATE: $17,900
3. Location: Tremont St. 100' west of Oliver. BIN 7708830
   Feature crossed: Tremont St.
   Remarks: Clearance posted at 11'8". Scupper drains broken and missing. Under
   bridge lights non-functioning. Dead trees at each abutment. Would like to see
   bridge clearance improved.
   \textit{PRIORITY: HIGH \ COST ESTIMATE: $5,050 (W/O CLEARANCE
   CHANGE)}

4. Location: Goundry St. 300' west of Oliver St. BIN 7708820
   Feature crossed: Goundry St.
   Remarks: Scupper drains broken or missing. Under bridge lighting missing. North
   side railing broken under bridge. Column foundations need pointing. Clearance
   posted at 12'6". Side slope cribbing needed on both approaches.
   \textit{PRIORITY: HIGH \ COST ESTIMATE: $46,250}

5. Location: Between end of Bridge St. and end of Island St. Tonawanda Island
   Railroad.
   Feature crossed: Little River
   Remarks: Bridge partially open. No navigation lights. No channel markers.
   Removal of this bridge is a high priority.
   \textit{PRIORITY: VERY HIGH \ COST ESTIMATE: $475,000}

AT GRADE CROSSING

6. Tonawanda Island Railroad at Island St.
   Feature crossed: River Road Arterial
   Remarks: Rubber crossing in very good condition. Crossing abandoned, traffic
   control signals and signage should be removed. This is a high priority.
   \textit{PRIORITY: HIGH \ COST ESTIMATE: $2,600}

7. Location: Island St. 100' east of River Road.
   Feature crossed: Island St.
   Remarks: 2 sets of abandoned tracks covered with asphalt. Need removal, high
   priority.
   \textit{PRIORITY: HIGH \ COST ESTIMATE: $4,500}
8. Location: Main St. at Island St.
   Feature crossed: Main St.
   **PRIORITY: HIGH  COST ESTIMATE: $8,100**

9. Location: Thompson St. 150’ west of Oliver St.
   Feature crossed: Thompson St.
   **PRIORITY: HIGH  COST ESTIMATE: $8,100**

10. Location: Oliver St. between Goundry St. and Thompson St.
    Feature crossed: Oliver St.
    Remarks: Asphalt crossing in good condition.

11. Location: Oliver St. between Sommer St. and Miller St.
    Feature crossed: Oliver St.
    Remarks: Timber Crossing in bad condition. Patched with asphalt. Street and both sidewalk crossings are high priority for replacement.
    **PRIORITY: HIGH  COST ESTIMATE: $66,000**

12. Location: Sommer St. at North Marion St.
    Feature crossed: Sommer St.
    **PRIORITY: HIGH  COST ESTIMATE: $60,000**

13. Location: Payne Ave. 150’ south of Miller St.
    Feature crossed: Payne Ave.
    Remarks: Timber crossing covered with asphalt patch. Street and both sidewalk crossing conditions very bad condition. High priority for replacement.
    **PRIORITY: HIGH  COST ESTIMATE: $66,000**

14. Location: Bryant St. 150’ south of Miller St.
    Feature crossed: Bryant St.
    **PRIORITY: HIGH  COST ESTIMATE: $50,000**
15. Location: Twin City Memorial Highway at Wheatfield St.
Feature crossed: Wheatfield St.
Remarks: Rubber crossing in fair condition.

16. Location: Twin City Memorial Highway at Wheatfield St.
Feature crossed: South bound Twin City Memorial Highway.
Remarks: Rubber crossing in fair condition.

17. Location: Twin City Memorial Highway at Wheatfield St.
Feature crossed: North bound Twin City Memorial Highway.
Remarks: Rubber crossing in fair condition.

18. Location: Division St. at Erie Ave.
Feature crossed: Division St.
Remarks: Rubber crossing in fair condition.

19. Location: Twin City Memorial Highway at Wheatfield St. - Lockport Running Line
Feature crossed: South bound Twin City Memorial Highway
Remarks: Rubber crossing in fair condition.

20. Location: Twin City Memorial Highway at Wheatfield St. - Lockport Running Line
Feature crossed: North bound Twin City Memorial Highway
Remarks: Rubber crossing in fair condition.

21. Location: Zimmerman St. at Erie Ave.
Feature crossed: Zimmerman St.
Remarks: Timber crossing in good condition.

22. Location: Walck Road 600' west of Erie Ave.
Feature crossed: Walck Road
Remarks: Timber crossing in very good condition.

23. Location: Walck Rd. 50' west of Erie Ave.
Feature crossed: Walck Road.
Remarks: Timber crossing in very good condition.
24. Location: Wurlitzer Dr. 50’ west of Erie Ave.
   Feature crossed: Wurlitzer Dr.
   Remarks: Timber street crossing and north sidewalk crossing in bad condition.
   Needs replacement. High priority.
   PRIORIT: HIGH  COST ESTIMATE: $55,000

25. Location: Melody Ln. 50’ west of Erie Ave.
   Feature crossed: Melody Lane
   Remarks: Timber crossing patched with asphalt in bad condition. Needs
   replacement. High priority.
   PRIORIT: HIGH  COST ESTIMATE: $40,000

26. Location: Erie Ave. at Niagara Falls Blvd.
   Feature crossed: Niagara Falls Blvd.
   Remarks: Rubber crossing in very good condition.

27. Location: Witmer Rd. 50’ north of River Road.
   Feature crossed: Witmer Rd.
   Remarks: Timber crossing in very good condition.

28. Location: Witmer Rd. 60’ north of River Rd.
   Feature crossed: Witmer Rd.
   Remarks: Asphalt crossing in very good condition.

29. Location: Ward Rd. 50’ east of River Rd.
   Feature crossed: Ward Road.
   Remarks: Asphalt crossing in very good condition.

30. Location: Ward Rd. 60’ east of River Rd.
   Feature crossed: Ward Rd.
   Remarks: Asphalt crossing in very good condition.

31. Location: Felton St. 50’ east of River Rd.
   Feature crossed: Felton St.
   Remarks: Timber crossing in very good condition.

32. Location: Felton St. 60’ east of River Rd.
   Feature crossed: Felton St.
   Remarks: Asphalt crossing in very good condition.
33. Location: Wheatfield St. 200' east of River Rd.
    Feature crossed: Wheatfield St.
    Remarks: Asphalt crossing in very good condition.

34. Location: Wheatfield St. 220' east of River Rd.
    Feature crossed: Wheatfield St.
    Remarks: Asphalt crossing in very good condition.

35. Location: Wheatfield St. 250' east of River Rd.
    Feature crossed: Wheatfield St.
    **PRIORITY: HIGH**  **COST ESTIMATE: $66,000**

36. Location: Robinson St. 200' east of River Rd.
    Feature crossed: Robinson St.
    Remarks: Rubber crossing in good condition.

37. Location: Robinson St. 220' east of River Rd.
    Feature crossed: Robinson St.
    Remarks: Rubber crossing in good condition.

38. Location: Robinson St. 230' east of River Rd.
    Feature crossed: Robinson St.
    Remarks: Rubber crossing in good condition.

39. Location: Robinson St. 350' east of River Rd.
    Feature crossed: Robinson St.
    **PRIORITY: HIGH**  **COST ESTIMATE: $10,800**

40. Location: Robinson St. 370' east of River Rd.
    Feature crossed: Robinson St.
    **PRIORITY: HIGH**  **COST ESTIMATE: $132,000**
41. Location: Schenck St. 100' west of North Marion St.
   Feature crossed: Schenck St.
   Remarks: Timber crossing covered with asphalt. Fair condition. Moderate priority.
   **PRIORITY: MODERATE  COST ESTIMATE: $6,000**

42. Location: Thompson St. 200' east of Main St.
   Feature crossed: Thompson St.
   Remarks: Asphalt crossing in very good condition.

43. Location: Thompson St. 210' east of Main St.
   Feature crossed: Thompson St.
   **PRIORITY: MODERATE  COST ESTIMATE: $4,000**

44. Location: Thompson St. 210' east of Main St.
   Feature crossed: Thompson St.
   Remarks: Timber crossing in fair condition.

45. Location: Thompson St. along west curb line of Main St.
   Feature crossed: Thompson St.
   **PRIORITY: HIGH  COST ESTIMATE: $5,400**

46. Location: Thompson St. 30' west of Main St.
   Feature crossed: Thompson St.
   **PRIORITY: HIGH  COST ESTIMATE: $2,700**

47. Location: River Road at Main St.
   Feature crossed: River Rd.
   Remarks: Abandoned rubber crossing in good condition. Removal is low priority.
   **PRIORITY: LOW  COST ESTIMATE: $18,750**
48. Location: Michigan St. 150' north of Taylor Dr.
Feature crossed: Michigan St.
Moderate priority.
PRIORITY: MODERATE COST ESTIMATE: $3,600

49. Location: Michigan 20' north of Bridge St.
Feature crossed: Michigan St.
PRIORITY: HIGH COST ESTIMATE: $5,400

Mr. Samuel Ferraro, NCP,D&T
NIAGARA COUNTY TOWNS – RAILROAD BRIDGE AND CROSSINGS MAPS AND RESPONSES
November 4, 1999

Mr. Samuel M. Ferraro, Commissioner  
Niagara County Planning, Development & Tourism  
59 Park Avenue  
Lockport, NY 14094-2740

Ref: Niagara County Railroad Bridges & Crossing Inventory Letter of 20 October 1999

Dear Mr. Ferraro:

The following is submitted in response to the above reference:

A. Town of Cambria priorities:

1. Baer Road Railroad Bridge crossing  
2. Route 31 just west of Shawnee Road (Route 425)  
3. Shawnee Road and Route 31  
4. Lockport-Junction Road (Route 270)  
5. Cambria Road  
6. Comstock Road  
7. Subbera Road

B. Town of Cambria cost estimates:

1. Baer Road Railroad Bridge crossing, $1,000,000.00  
2. Route 31 just west of Shawnee Road (Route 425), $40,000.00  
3. Shawnee Road and Route 31, $40,000.00  
4. Lockport-Junction Road (Route 270), $40,000.00  
5. Cambria Road, $40,000.00
6. Comstock Road, $40,000.00
7. Subbera Road, $40,000.00

Please feel free to contact me if you need additional information.

Sincerely,

Wright H. Ellis, Supervisor

Re: Railroad and Bridge Survey

Dear Sir:

The following is the priority schedule for the Town of Lockport Railroad and Bridge Survey. This survey was submitted on October 7, 1999.

A.) Priority Item #1 – Repair railroad overpass between Rt. 31 & Erie Barge Canal.
B.) Priority Item #2 – Wilson Road grade crossing.
C.) Priority Item #3 – Lockport Junction Road grade crossing.
D.) Priority Item #4 – Ridge Road grade crossing.

Please file this schedule with our previous report sent to you. If you have any Questions, please feel free to call our office.

Sincerely,

RE: NIAGARA COUNTY RAILROAD BRIDGE AND CROSSING INVENTORY

Dear Supervisor Westcott:

Kindly be advised, as part of our on-going efforts to improve rail transportation in Niagara County, this department is developing a comprehensive county-wide list of railroad bridges and railroad crossings. The purpose of this inventory will be for Niagara County to request funds for future railroad improvements. I am interested in your review of the attached information we have obtained from the New York State Department of Transportation and mapped ourselves for your community. Specifically, I would like to know the answers to the following questions:

A. For the railroad bridges mapped:
   - Does the posted bridge height present a restriction on commercial traffic?
   - Would you like the bridge clearance improved?
   - Does the condition of the bridge structure warrant local concern for safety?
   - Does your community feel it is a priority to repair the bridge(s)?

B. For the railroad crossings mapped:
   - Is/are the crossing(s) in need of repair?
   - If more than one crossing is shown on the map, does your community have a preference for which crossings are improved (with a rubberized crossing) first?
   - Are there other active rail crossings in your community that we missed and need to be included on the map?
   - Are there abandoned rail lines in your community you would like removed?

Please review this information with your engineer or building inspector and respond to my office with a written response no later than Monday, October 18, 1999. I realize this is a short time frame, but my goal is to present a final package to those involved as soon as possible.
As always, if you have any questions, please do not hesitate to contact me at 439-7235.

Thank you for your cooperation in making this a better Niagara!

Sincerely,

Re: Rail and Bridge Crossings
Town of Wheatfield

Dear Sam,

In response to your recent inquiry regarding the rail and bridge crossings in the Town of Wheatfield, I would like to offer the following list in order of priority.

**Railroad Bridges**

1. The bridge at Niagara Falls Blvd. - unsightly and badly in need of paint.
2. and 3. The bridges at Walmore Road and Lockport Road - Satisfactory condition.

**Railroad Crossings**

1. The crossing at Walmore Road near Cory Dr.- very steep grade makes approach possibly unsafe.
2. The crossing at Jagow Road - is satisfactory
3. and 4. The crossings at Shawnee and N.F.B newly resurfaced, excellent condition.
5. The crossing at Townline Road - does not cross road any longer.

In general, however, the bridges and crossings in Wheatfield are in satisfactory condition. I hope this information will be helpful to you. If you have any questions regarding the cost estimates, please contact our Highway Department at 692-3508.

Sincerely,

Don MacSwan
Building Inspector

NIAGARA COUNTY VILLAGES – RAILROAD BRIDGE AND CROSSINGS MAPS AND RESPONSES
October 2, 1999

Mr. Samuel M. Ferraro  
Commissioner, Niagara County  
Planning, Development & Tourism  
59 Park Avenue  
Lockport, NY 14094-2740

Dear Commissioner Ferraro:

In response to your letter of October 20, 1999, regarding repairs of the railroad crossings in Middleport, as that kind of repair work is outside my jurisdiction, you should ask the railroad owners for cost estimates.

The following is the order in which the crossing should be repaired:

Kelly Avenue  
Vernon Street  
Orchard Street

If you need any more information regarding this matter, please do not hesitate to contact me.

Sincerely,

James E. Mahar  
Superintendent, Dept. Public Works
RECENT LETTERS FROM
LINDA MORGAN, CHAIR,
SURFACE TRANSPORTATION BOARD
AND NEWSPAPER ARTICLES
The Honorable John J. LaFalce  
United States House of Representatives  
Washington, DC 20515

Re: Service in Buffalo Area

Dear Congressman LaFalce:

As you may know, last month I had the opportunity to visit Buffalo and to discuss rail service issues with area shippers and the railroads that serve them. I understand and share the concern that I know you have for improving the quality of rail service being provided and the effect of present service levels on Buffalo-area shippers.

At the end of my visit to Buffalo, I stated that I would develop a plan for addressing the current service difficulties so as to minimize their impact on shippers in the region. Today, through letters to the Chief Executive Officers of Norfolk Southern Corporation and CSX Corporation (copies enclosed), I have set such a plan in motion. Our plan, which covers many issues of concern to Buffalo-area shippers, and which requires that certain efforts be undertaken over the course of the next month, will:

1. Build on a request made by Senator Schumer that the railroads address the problems caused by the current configuration of the railroad bridge at CP Draw, by directing the filing of more specific information on all options available;

2. Focus on other ways to improve the rail infrastructure in the area, which all would agree is critical to the issue of congestion and service improvement;

3. Require the railroads to report on ways in which they are assisting one another and are using other available railroads to relieve congestion in the Buffalo area, particularly with a view toward the winter months ahead;

4. Expand upon the "Hotline" initiative currently under way by focusing on additional mechanisms to improve communication between the railroads and Buffalo-area shippers, and on the resolution of service concerns such as transit times;

5. Promote communication by the railroads with shippers on how claims issues will be promptly addressed;
6. Initiate as a formal proceeding the 3-year rate study discussed in the Board's decision approving the Conrail transaction, which will include a review of the application of Board-ordered reduced switching charges and of fees paid by the Canadian National (CN) and Canadian Pacific (CP) railroads; and

7. Hold CSX to its representations made to the Board that it would work with CN and CP to effect increased access to these carriers for cross-border, truck-competitive traffic, and that it would promote economic development in the region.

What I am most concerned about and what will do the most for the economic health of the Buffalo area is the expeditious restoration of responsive and reliable rail service. I believe that the plan outlined herein will provide the accountability needed to achieve that goal. It also adds substantially to what the Board is already doing to monitor the Conrail implementation, and to the Board’s ongoing efforts through the Office of Compliance and Enforcement to resolve shipper service complaints informally.

At the conclusion of my visit last month, I agreed to visit the Buffalo area again in 6 months to assess the situation. I would be glad to meet with you at any time to review the implementation of our plan.

If I may be of further assistance in this or any other matter, please do not hesitate to contact me.

Sincerely,

Linda J. Morgan

Enclosures
Dear Mr. Snow:

I appreciate all of the hard work expended by you and your company to deal with the service quality issues that have arisen since implementation of the Conrail transaction. I know that service quality has improved in some respects, and I hope that the improvement will continue.

With respect to the Buffalo area, however, there are still service concerns among the shipping public and Members of the New York Congressional delegation, as discussed at the October 18 meeting that I attended in Buffalo. This letter addresses those concerns, in what I believe to be a constructive way, by setting out a plan of action that will show the progress being made in dealing with the service issues most prominently raised at the Buffalo meeting.

1. **CP Draw.** Concern was expressed about the configuration of the railroad bridge at CP Draw. I know that at the October 18 meeting Senator Schumer asked both railroads to look into the matter and to make recommendations within 30 days. Building upon what Senator Schumer has requested, please provide to the Board, by December 15, 1999, your views, together with those of NS, on the following: (a) all issues associated with rehabilitation and reconfiguration of the bridge, including engineering and financing/funding issues; (b) how a change in the U.S. Coast Guard’s “navigability” designation of the Buffalo River upstream from the CP Draw might affect the financial considerations associated with rehabilitation and reconfiguration of the bridge; and (c) any viable alternatives to rehabilitating the bridge that would still provide for improved service levels.

2. **Infrastructure in General.** Apart from the CP Draw issue, much concern was raised at the October 18 meeting about the general state of the rail infrastructure in the Buffalo area. During the rail service crisis in the West a few years ago, the involved carriers were asked to provide us with detailed reports on their intentions with respect to infrastructure upgrades in the
Houston area. Those reports proved extremely helpful to us and to interested parties. I realize
that you are already reporting generally on your infrastructure activities on a monthly basis, but I
would appreciate your expanding the construction and capital projects report for November 1999
(due December 1, 1999) and each such monthly report thereafter to include your activities and
plans regarding all infrastructure projects anticipated or currently underway in the Buffalo area.

3. Carrier Cooperation. One of the lessons that we learned from the service crisis in the
West is that congestion can best be cleared up when all of the carriers serving a region work
一起. Yet, a principal concern that we heard in Buffalo was that your company and NS do
not always communicate productively on issues of concern to shippers. In this regard, both you
and Mr. Goodc have indicated in the past that your companies have worked together, and will
continue to work together and with other carriers, including smaller railroads, to help improve
traffic flows and relieve congestion.

Therefore, it would be useful if you could provide information on other carriers with
which you are now working or will work to assist you with service improvement in the Buffalo
area. In particular, to promote continued cooperation and coordination between CSX and NS, I
would like you to name formal contacts who will communicate regularly and provide, on a bi-
weekly basis beginning with the reporting to be filed with the Board on December 1, 1999, an
update as to what is being done and the progress that is being made in improving traffic flows
and clearing congestion in the Buffalo area. Also, I would appreciate being informed about your
contingency planning for your winter operations in the Buffalo area as part of your
December 1st report.

4. Customer Service. One of the major sources of shipper frustration throughout the
Buffalo area involves customer service, and particularly the inability of shippers to get accurate
information on deliveries. In that regard, two concerns remain: first, that there has been no
designated Buffalo-area representative who is knowledgeable about the Buffalo area and who can
serve as a central contact point for shippers for all Buffalo-area service issues; and second,
that customer service inquiries are not responded to fully such that shippers know the status of
either their inquiries or their shipments.

You have agreed to establish a toll-free “hotline” for Buffalo-area shippers. I would like
you to report to the Board about your hotline effort. In particular, I would like to know the
designated representative responsible for interfacing with customers in this effort, and to have a
report submitted each week, beginning with the reporting to be filed on November 24, 1999, that
contains a summary of the calls received on your hotline, including referrals from the Board, and
indicating the number of service issues that have been resolved and the number that remain
pending. As you work with individual shippers on their delivery issues, I would expect that you
will also be addressing their concerns about their transit times.

5. Information Technology. Many of the service problems appear to be related to
inaccurate data provided by carriers through their information technology systems. I would like
you to expand your existing monthly reporting on information technology, beginning with the December 1, 1999 report, to focus specifically on efforts impacting the Southern Tier and the Buffalo area.

6. Claims. Shippers have expressed concerns about claims issues not yet being addressed and about not understanding fully the procedures for the processing of claims. In this regard, you should communicate fully with shippers as to what information should be assembled and what your procedures for the expeditious resolution of claims will be when a claim is processed. I would appreciate your sharing with the Board, by December 1, 1999, general information regarding your communication with shippers about the claims handling process.

7. Rates. Several shippers have expressed concerns about rate levels. I wanted you to know that the Board will be initiating shortly, subject to a vote by all the Board members, the 3-year rate study for the Buffalo-area discussed in the Board’s decision (ordering paragraph 38) approving the Conrail transaction. As part of that study, we will review the application of the Board-ordered reduced switching charges, including the Board’s extension of the switching component of the National Industrial Transportation League agreement to certain international rail movements into and out of Niagara Falls and to situations where shortlines paid switching charges to Conrail and where Conrail received switching services from CSX or NS. The study will also examine the Board’s imposition, as a condition, of CSX’s representation regarding voluntary agreements providing for lower switching fees in certain instances for Buffalo-area movements involving the Canadian Pacific (CP) and Canadian National (CN) railroads. This study will be conducted by way of a formal proceeding, in which you will be asked to participate.

8. Representations. Finally, I would like a report from you by December 1, 1999, on how you are putting into effect the representations that your company made to the Board — which the Board imposed as conditions to its approval of the Conrail transaction — that it will work with CN and CP to effect increased access to these carriers for cross-border, truck-competitive traffic, and that it will work with relevant entities in the Buffalo area to promote economic development in the region, particularly through the formation of a committee to explore the issue.

9. Summary. To conclude, I am asking that you submit to Melvin Clemens, the Director of our Office of Compliance and Enforcement, the following information:

- Building on Senator Schumer’s request, jointly, by December 15, 1999, your views concerning the CP Draw issue.
- Monthly, beginning with the December 1, 1999 capital projects report, information regarding infrastructure improvements in the Buffalo area.
- Designation of Buffalo-area contacts responsible for cooperative efforts with other railroads to improve service in the area; and a joint or separate biweekly report beginning with the reporting to be filed with the Board on December 1, 1999, to address cooperative
efforts to improve service in the area, including winter contingency plans.

- Regarding your hotline, the designation of a representative in this effort; and a weekly report to be filed with the Board beginning on November 24, 1999, concerning the calls received and the status of customer complaint resolution, including concerns about transit times.
- Monthly, beginning with the December 1, 1999 information technology report, an update on specific computer efforts that should affect Buffalo-area shippers in a positive way.
- Information on your claims handling process by December 1, 1999.
- A report by December 1, 1999, on efforts in connection with representations made to the Board about cross-border truck traffic and economic development in the Buffalo area.

As previously referenced, the rate study will be conducted separately as a formal proceeding.

I know that you are focused on improving service in the Buffalo area and throughout the East. The steps I am taking in this letter are focused on addressing service concerns raised during my visit in Buffalo, and tracking the progress in restoring service levels important to the continued economic development in the Buffalo area. I appreciate your continued cooperation in this endeavor.

Sincerely,

Linda J. Morgan

Re: Service in Buffalo Area

Dear Mr. Goode:

I appreciate all of the hard work expended by you and your company to deal with the service quality issues that have arisen since implementation of the Conrail transaction. I know that service quality has improved in some respects, and I hope that the improvement will continue. 

With respect to the Buffalo area, however, there are still service concerns among the shipping public and Members of the New York Congressional delegation, as discussed at the October 18 meeting that I attended in Buffalo. This letter addresses those concerns, in what I believe to be a constructive way, by setting out a plan of action that will show the progress being made in dealing with the service issues most prominently raised at the Buffalo meeting.

1. **CP Draw.** Concern was expressed about the configuration of the railroad bridge at CP Draw. I know that at the October 18 meeting Senator Schumer asked both railroads to look into the matter and to make recommendations within 30 days. Building upon what Senator Schumer has requested, please provide to the Board, by December 15, 1999, your views, together with those of CSX, on the following: (a) all issues associated with rehabilitation and reconfiguration of the bridge, including engineering and financing/funding issues; (b) how a change in the U.S. Coast Guard’s “navigability” designation of the Buffalo River upstream from the CP Draw might affect the financial considerations associated with rehabilitation and reconfiguration of the bridge; and (c) any viable alternatives to rehabiliting the bridge that would still provide for improved service levels.

2. **Infrastructure in General.** Apart from the CP Draw issue, much concern was raised at the October 18 meeting about the general state of the rail infrastructure in the Buffalo area. During the rail service crisis in the West a few years ago, the involved carriers were asked to provide us with detailed reports on their intentions with respect to infrastructure upgrades in the Houston area. Those reports proved extremely helpful to us and to interested parties. I realize
that you are already reporting generally on your infrastructure activities on a monthly basis, but I would appreciate your expanding the construction and capital projects report for November 1999 (due December 1, 1999) and each such monthly report thereafter to include your activities and plans regarding all infrastructure projects anticipated or currently underway in the Buffalo area.

3. Carrier Cooperation. One of the lessons that we learned from the service crisis in the West is that congestion can best be cleared up when all of the carriers serving a region work together. Yet, a principal concern that we heard in Buffalo was that your company and CSX do not always communicate productively on issues of concern to shippers. In this regard, both you and Mr. Snow have indicated in the past that your companies have worked together, and will continue to work together and with other carriers, including smaller railroads, to help improve traffic flows and relieve congestion.

Therefore, it would be useful if you could provide information on other carriers with which you are now working or will work to assist you with service improvement in the Buffalo area. In particular, to promote continued cooperation and coordination between NS and CSX, I would like you to name formal contacts who will communicate regularly and provide, on a bi-weekly basis beginning with the reporting to be filed with the Board on December 1, 1999, an update as to what is being done and the progress that is being made in improving traffic flows and clearing congestion in the Buffalo area. Also, I would appreciate being informed about your contingency planning for your winter operations in the Buffalo area as part of your December 1st report.

4. Customer Service. One of the major sources of shipper frustration throughout the Buffalo area involves customer service, and particularly the inability of shippers to get accurate information on deliveries. In that regard, two concerns remain: first, that there has been no designated Buffalo-area representative who is knowledgeable about the Buffalo area and who can serve as a central contact point for the shippers for all Buffalo-area service issues; and second, that customer service inquiries are not responded to fully such that shippers know the status of either their inquiries or their shipments.

You have agreed to establish a toll-free “hotline” for Buffalo-area shippers. I would like you to report to the Board about your hotline effort. In particular, I would like to know the designated representative responsible for interfacing with customers in this effort, and to have a report submitted each week, beginning with the reporting to be filed on November 24, 1999, that contains a summary of the calls received on your hotline, including referrals from the Board, and indicating the number of service issues that have been resolved and the number that remain pending. As you work with individual shippers on their delivery issues, I would expect that you will also be addressing their concerns about their transit times.

5. Information Technology. Many of the service problems appear to be related to inaccurate data provided by carriers through their information technology systems. I would like you to expand your existing monthly reporting on information technology, beginning with the
December 1, 1999 report, to focus specifically on efforts impacting the Southern Tier and the Buffalo area.

6. **Claims.** Shippers have expressed concerns about claims issues not yet being addressed and about not understanding fully the procedures for the processing of claims. In this regard, you should communicate fully with shippers as to what information should be assembled and what your procedures for the expeditious resolution of claims will be when a claim is processed. I would appreciate your sharing with the Board, by December 1, 1999, general information regarding your communication with shippers about the claims handling process.

7. **Rates.** Several shippers have expressed concerns about rate levels. I wanted you to know that the Board will be initiating shortly, subject to a vote by all the Board members, the 3-year rate study for the Buffalo-area discussed in the Board's decision (ordering paragraph 38) approving the Conrail transaction. As part of that study, we will review the application of the Board-ordered reduced switching charges, including the Board's extension of the switching component of the National Industrial Transportation League agreement to certain international rail movements into and out of Niagara Falls and to situations where shortlines paid switching charges to Conrail and where Conrail received switching services from CSX or NS. The study will also examine the Board's imposition, as a condition, of CSX's representation regarding voluntary agreements providing for lower switching fees in certain instances for Buffalo-area movements involving the Canadian Pacific (CP) and Canadian National (CN) railroads. This study will be conducted by way of a formal proceeding, in which you will be asked to participate.

8. **Summary.** To conclude, I am asking that you submit to Melvin Clemens, the Director of our Office of Compliance and Enforcement, the following information:

- Building on Senator Schumer's request, jointly, by December 15, 1999, your views concerning the CP Draw issue.
- Monthly, beginning with the December 1, 1999 capital projects report, information regarding infrastructure improvements in the Buffalo area.
- Designation of Buffalo-area contacts responsible for cooperative efforts with other railroads to improve service in the area; and a joint or separate biweekly report beginning with the reporting to be filed with the Board on December 1, 1999, to address cooperative efforts to improve service in the area, including winter contingency plans.
- Regarding your hotline, the designation of a representative in this effort; and a weekly report to be filed with the Board beginning on November 24, 1999, concerning the calls received and the status of customer complaint resolution, including concerns about transit times.
- Monthly, beginning with the December 1, 1999 information technology report, an update on specific computer efforts that should affect Buffalo-area shippers in a positive way.
- Information on your claims handling process by December 1, 1999.
As previously referenced, the rate study will be conducted separately as a formal proceeding.

I know that you are focused on improving service in the Buffalo area and throughout the East. The steps I am taking in this letter are focused on addressing service concerns raised during my visit in Buffalo, and tracking the progress in restoring service levels important to the continued economic development in the Buffalo area. I appreciate your continued cooperation in this endeavor.

Sincerely,

[Signature]

Linda J. Morgan
U.S. regulator asks Norfolk, CSX to give progress report

By DOUGLAS TURNER
Washington Bureau Chief

WASHINGTON — The nation's chief railroad regulator, Linda J. Morgan, has requested detailed progress reports from the two lines serving industries in Erie and Niagara counties as a follow-up to a summit meeting she had with agitated shippers in Buffalo on Oct. 18.

Morgan, chairwoman of the U.S. Surface Transportation Board, refrained from issuing any orders to the two rail giants, CSX and Norfolk Southern, to remedy a problem that local officials say threatens 25,000 industrial jobs.

Congressional reaction Tuesday to Morgan's long-sought comments on the plight of Niagara Frontier industries broke along political lines.

Rep. Jack F. Quinn said Morgan could have asked "the same questions months ago."

The Hamburg Republican also criticized Morgan for not imposing railroad competition in the Buffalo-Niagara region as she did in Detroit, Philadelphia, New Jersey and the New York City area.

Meanwhile, Rep. Thomas M. Reynolds, R-Clarence, said Morgan and fellow board members "screwed Western New York when they didn't give us competitive service."

Reynolds scoffed at Morgan's plan to take three years to study prices that the railroads are charging local employers to ship goods.

"You wonder after three years what we're going to have left," Reynolds said.

However, Democratic Sen. Charles E. Schumer, who brought Morgan to Buffalo for the Oct. 18 meeting, said she is pleased that she is "addressing operational issues. After those are dealt with, we can move to competitive issues."

During that conference, speakers from a two-county coalition of manufacturers complained of lost or failed rail shipments, erroneous billings and unending delays.

"The situation here is "in crisis, the same as it was a month ago," said Ronald Coan, head of the Erie County Industrial Development Agency, which helped organize the coalition.

Schumer described Morgan's letters to CSX and Norfolk Southern as "a great first step."

Morgan wrote to CSX and Norfolk Southern asking them to decide what they plan to do about the gridlock on a CSX-owned bridge that spans the Buffalo River.

The Control Point drawbridge in South Buffalo, just downstream from the Mobil refinery, is one of the worst railroad bottlenecks in the Northeast, according to most analysts.

According to correspondence released by Quinn, Morgan asked the two railroads, which now control the Niagara region, for a number of other progress reports on infrastructure investments and links to the Canadian National Railroad and other lines.

Rep. John J. LaFalce, D-Town of Tonawanda, said he is "pleased that Chairman Morgan has apparently decided to take an active role in this situation. Her letter is a forceful challenge to the railroads."

A longtime aide to congressional Democrats, Morgan was named Surface Transportation Board chairwoman in 1996 by President Clinton. Her term expires Dec. 31, but she continues to serve at the pleasure of the president.

In 1998, after CSX and Norfolk Southern bought out Conrail, Morgan refused to order competition between the two lines in the Buffalo area.

Coan said he was pleased that Morgan has written to the railroads, "but she doesn't address the chronic long-term problem, which is excessive car-switching charges in the Erie-Niagara region — a direct result of monopolistic control by the railroads of our shippers."

The shippers' consortium has filed suit in federal court in New York to get Morgan and the Surface Transportation Board to use emergency powers to order competition, price cuts and other remedies for the Buffalo area.

In her letter to the railroads, Morgan noted that the two companies "do not always communicate productively on issues of concern to shippers." She asked them to appoint a liaison who will report biweekly.

Addressing complaints that shippers have not been reimbursed for losses blamed on the railroads' failure to move their goods, Morgan wrote to CSX Chairman John W. Snow: "I would appreciate your sharing with the Surface Transportation Board, by Dec. 1, general information regarding your communication with shippers about the claims handling process."
Falls, North Tonawanda top list of w

By THOMAS J. PROHASKA
News Niagara Bureau

NIAGARA FALLS — As Niagara County prepares to submit a list of its worst railroad bridges and crossings in hopes of seeing them repaired, Niagara Falls and North Tonawanda have the most to gain.

The two cities have the largest number of railroad crossings in the county and the largest number in need of repair.

Low bridge clearances impede truck traffic and occasionally cause accidents, Niagara Falls officials said. North Tonawanda has a swing railroad bridge over the Little Niagara River that was recently vandalized and left stuck in a partially open position.

In mid-October, Linda Morgan, chairwoman of the federal Surface Transportation Board, visited Buffalo and was handed a list of all crossings and bridges in Erie and Niagara counties. Local leaders urged her to pressure the railroads to invest money in repairing those that need improvement or removing those that are no longer needed.

That’s just one aspect of the purchase of the now-defunct Consolidated Rail Corp. by CSX Corp. and Norfolk Southern.

The two private railroads carved up Conrail’s holdings, and CSX ended up with Niagara and Erie counties as part of its territory.

Although businesses that ship by rail took up much of the time during Morgan’s visit Oct. 18 with tales of freight bottlenecks caused by old and inadequate rail facilities, the local congressional delegation also presented concerns about crossings and bridges that present problems to drivers every day.

Rep. John J. LaFalce, D-Town of Tonawanda, said, “I have initiated a review of trouble spots, with the assistance of the Buffalo Niagara Partnership, the Erie County Department of Environment and Planning, the Niagara County Department of Planning, Development, and Tourism and numerous local municipalities.”

In Niagara County, Planning, Development, and Tourism Commissioner Samuel M. Ferraro acted on LaFalce’s request, sending letters to all municipalities that have railroad bridges and crossings to seek their comments on locations that need repair or removal.

Concrete is crumbling at the 10th St. railroad crossing, between Buffalo Avenue and Falls Street in Niagara Falls.

The overpass on Main Street between Ontario Street and Depot Street.
The affected municipalities are the three cities, the Village of Middleport and eight towns.

Morgan and the Western New York congressmen received a general list of crossings and bridges, with comments from each municipality. The prioritized list, being compiled this week, will include rough cost estimates.

"Thereafter, it will be necessary to pursue public and private long-term funding so that the repairs can be made," LaFalce said.

At the Oct. 18 meeting in Buffalo, Mark G. Aron, CSX vice president for public affairs, said the company plans to invest more than $20 million in Western New York over the next several years.

CSX spokesman Robert T. Sullivan said the company is concentrating on alleviating the freight problems shippers have been encountering.

"Our focus right now is on service and customers," he said, "which is not to minimize our interests in the crossings."

Niagara Falls City Engineer Kevin P. O'Brien said, "When it comes right down to it, we count on the railroads to fix the crossings."

O'Brien said that as far as he knows, the last railroad crossing repairs in Niagara Falls occurred five or six years ago on Buffalo and Lafayette avenues.

One of the worst problem bridges in Niagara Falls crosses Main Street between Ontario Avenue and Depot Street.

"You can rest assured, Main Street will be near the top of the list," O'Brien said.

There are two problems with the bridge, which lies on the rail line leading to the international railroad bridge to Canada.

Its clearance is posted at only 11 feet. City traffic planner Thomas J. Miklejn said state law requires all underpasses that are not at least 14 feet high to be posted with a height one foot less than the actual height.

"I think the height of that one actually varies," Miklejn said.

The second problem is that there is a bridge support in the middle of the street. O'Brien's report to Ferraro calls it a "fixed deadly object."

O'Brien said he is hopeful the center steel supports can be removed and the clearance increased during a Main Street-Lewiston Road reconstruction project tentatively set for 2002 or 2003.

The entire job is estimated at $8.4 million, O'Brien said, with federal funding covering 80 percent of the cost.

"I think it would be very difficult to raise the level of the rails," O'Brien said. "Maybe the bridge could be rebuilt. I don't know if the (project) budget can support changing the road."

But the project is still in the design phase, O'Brien said.

The Main Street crossing is one of seven in Niagara Falls with clearances lower than 14 feet. Tractor-trailers are allowed to be as much as 13 feet 6 inches high without obtaining an oversized-load permit.

The low bridges cause truckers to take detours. If they don't, they live to regret it.

"There's many a time that trucks have gotten stuck under the bridge or sheared the top off," O'Brien said.

An underpass on Portage Road between Buffalo and Mackenna avenues is also posted at 11 feet. The other railroad bridges on the Niagara Falls list include:

- Depot Street between Ninth and Main streets, 11 feet 4 inches;
- 10th Street between Buffalo Avenue and Falls Street, 12 feet 3 inches;
- Buffalo Avenue between 47th and 53rd streets, 12 feet 4 inches;
- College Avenue between Highland Avenue and Bell Street, 12 feet 7 inches;
- Whirlpool Street between Ontario Avenue and Depot Street, 12 feet 10 inches.

Miklejn said he couldn't think offhand of a railroad underpass in the city that met the 14-foot standard.

The city also has 20 active grade crossings. Most are listed in fair to good condition, although six are rated poor. They are on Ninth Street, Acheson Drive, Garden, Highland, Iroquois and Lafayette avenues.

In addition, a former crossing at Simmons Avenue and 47th Street was paved over, but the rails are showing through the asphalt. O'Brien rates that as a candidate for removal.

In North Tonawanda, Public Works Superintendent Gary J. Franklin handed in a list of five bridges and 44 grade crossings; although a few are paved over.

- City Engineer Dale Marshall said, as far as he's concerned, the worst crossings in the city are on side streets off Erie Avenue, such as Wurlitzer Drive. The streets cross a rail line that services the Stone Container Corp. plant in
Niagara Falls is in particularly bad shape.
Federal regulator says railroads must invest more in their local operations

By FRED O. WILLIAMS
News Business Reporter

Rail carriers must invest more in their Buffalo operations and work harder to end shipping nightmares that have plagued the area since the Conrail break-up this summer, a federal rail regulator said Monday.

Linda Morgan, chair of the Surface Transportation Board, said she will push CSX Corp. and Norfolk Southern to pump more money into aging Buffalo facilities that cause freight bottlenecks.

"I share their (shippers') frustration — I am not happy with where service is today and where it has been since June 1," Morgan said during a meeting with shippers and rail officials Monday in Buffalo.

The Surface Transportation Board approved the takeover of Conrail by CSX and Norfolk Southern effective June 1. In the Buffalo area, CSX acquired former Conrail assets, including the Frontier Yard between Broadway and Sycamore streets and the CP drawbridge over the Buffalo River, a choke point on a freight artery that other carriers share.

The two railroads agreed to present options for improving capacity of the critical bridge within 30 days, without committing to improvements.

The meeting laid the groundwork to end rail delays that threaten Western New York's ailing industrial sector, said Sen. Charles E. Schumer, who organized the event. Since the Conrail break-up, companies around the region have reported costly delays shipping products and receiving materials.

U.S. Rep. Jack F. Quinn (R-Hamburg) said a $3.5 billion federal loan program might be tapped for Buffalo rail improvements. Quinn, who attended the meeting along with U.S. Rep. Thomas M. Reynolds (R-Springville), is urging Transportation Secretary Rodney Slater to implement the rail improvement loan program, which was enacted more than a year ago.

Morgan said she will return in six months and as-

See Railroads Page E7
Railroads: ‘We really want to grow the traffic’

Continued from Page E4

cess how well the carriers have met improvement goals. “I will go back to Washington and respond with a game plan,” she said.

However, Morgan said she is not convinced that a lack of rail competition needs addressing, as shippers and local economic development officials charge.

The breakup, including a $250 cap on fees for switching rail cars between carriers, has increased the level of competition since Conrail’s operation, she said. While some shippers call the cap meaningless because of poor service, the board is conducting a three-year study of shipping prices that will determine if area companies are being gouged by monopoly rail prices.

Morgan visited Buffalo along with rail company officials to hear about delays that could “choke the life out of Western New York’s economy,” according to Schumer.

“It (the service crunch) is making Buffalo less attractive as a manufacturing and shipping hub,” he said. About 25,000 jobs depend on companies that rely on rails to get materials and ship products, officials said.

The problems have caused General Mills to shift some flour production to Kansas City, transportation manager Leo J. Wasescha said.

“We can make flour in the Midwest and ship it to the East cheaper than (from) Buffalo,” he said. Kansas City is now supplying Philadelphia, New York and Boston, he said.

Delays have hurt other major employers including Ford’s Buffalo Stamping Plant in Hamburg, Occidental Petroleum’s OxyChem unit in Niagara Falls and Delphi Harrison Thermal Systems in Lockport.

“We are committed to making this service as good and frankly better than what Conrail provided,” Mark G. Aron, CSX executive vice president for public affairs, said.

It takes an extra six days to ship from Delphi Harrison to General Motors Corp.’s assembly plant in Janesville, Wis., said Gerard P. McGonigle, production control and logistics director, one of several costly rail delays the company faces.

“That’s going to affect our future business with GM,” he said.

At Agway Agricultural Products, cars from Ohio that used to spend eight days en route are now in transit for 30 days, said Peter DelGobbo, director of bulk transportation. Besides the wait, the company faces higher prices because of leased cars that cost $400 a month, he said.

“We’re asking for the Surface Transportation Board to help solve the problem because right now it’s absolutely terrible,” he said.

Rail officials said they’re working on solutions, and that service should continue to improve as Conrail’s network is absorbed.

“We are committed to making this service as good and frankly better than what Conrail provided,” said Mark G. Aron, CSX executive vice president for public affairs.

Buffalo, where CSX employs 900 people, is an important western gateway that is already getting increased investment, he said. The company will spend over $20 million in Western New York over the next several years, despite New York taxes that are three times what CSX pays in other states, he said. The company is calling for tax reform that will end what Aron called a disincentive to improve rail infrastructure.

“This is a big area for us. We really want to grow the traffic,” Aron said.

Norfolk Southern is spending $13 million to upgrade its Bisons yard, a project that was accelerated so it can be complete by December, said Jon Manetta, senior vice president of operations.

Rail cars sat idle for an average of 37.2 hours in CSX Corp.’s Buffalo yards in the first week of October, longer than the 33.4 hour system average. The “terminal dwell” time, an indicator of congestion, is higher than under Conrail. However, the railroad is seeing its peak traffic period now and congestion should ease with fall shipping volume in November, officials said.
Rail Presentation
July 27, 2000

Good Morning! My name is Peter M. Cammarata, and I am the Executive Vice President of Buffalo Economic Renaissance Corporation (BERC), the City of Buffalo's economic development agency. My comments this morning are made on behalf of the Honorable Anthony M. Masiello (Mayor of the City of Buffalo) and Alan H. DeLisle (President of BERC).

Although today's open meeting is not an official Surface Transportation Board (STB) hearing, we feel it is incumbent on the representatives of Norfolk Southern Corporation (NS) and CSX Transportation to present our comments, concerns and recommendations in their fullest form to the Surface Transportation Board.

Long before CSX and NS took over the Conrail operation in 1999, many of us sat through the pre-acquisition “hoopla” which emphasized the promises of increased competition and improved service throughout the Northeast United States, and most importantly, Western New York and Buffalo. Private sector “shippers” and public sector “shapers” joined forces under the moniker of Erie/Niagara Rail Steering Committee (ENRS) to encourage the STB to consider implementing a Shared Access Area for Western New York. We felt that this type of structure would not only benefit railroad customers, but it would “spawn” functionally superior infrastructure and operational efficiencies.

The sad fact is that the last year of rail operations in Western New York has included far too much “swimming upstream” and far too little “spawning” of economic development. And
what performance goals are we swimming upstream to get to? ............those established by
Conrail!

There is no doubt that substantial investments need to be made to improve Western New
York’s rail infrastructure to raise the overall performance goals. Let’s all take a step back for a
moment though, and re-adjust our focus. Our focus has to be the shippers. the customers.
Infrastructure investments by the railroads should not be driven by the amount of public funding
participation; it should be driven by the demands of the customers and the business, in a
competitive environment.

The City of Buffalo encourages the railroads to invest in intermodal and transflo facilities
on underutilized land within the City. because the customer demand is there. The Buffalo
Economic Renaissance Corp. will work closely with the railroads to facilitate the logistics
surrounding these investments.

The BERC is grateful to the Erie County Industrial Development Agency (ECIDA) and
the Erie/Niagara Rail Steering Committee for coalescing the railroad issues for our region, and
we support their call for the railroads to fund an objective study of the regions rail network.
Good morning. My name is Steve Fisk. I am here today representing Canadian Pacific Railway (CPR). Thank you for the opportunity to express our views regarding rail operations in the Buffalo area.

CPR is a class 1 railroad that reaches from the Port of Vancouver, in the west, to the ports of New York and Philadelphia in the east. We serve the US midwest via the SOO Line and the northeastern US via the Delaware & Hudson (D&H). Both railways are wholly owned subsidiaries of CPR. In practice, the D&H, the eastern portion of the SOO Line and the CPR in eastern Canada are all managed as CPR's "Eastern Network", with offices in Montreal, and are operated as an integral part of the overall Canadian Pacific Railway.

CPR's interests and involvement in the Buffalo Terminal area reach back many years. Traditionally CPR has accessed Buffalo via connections at Niagara Falls, N.Y. The traffic moving over this gateway can be broken into three categories.

The first grouping of traffic originates or terminates in the Buffalo switching district connecting Canada and the mid-west to local consumers and manufactures. This represents approximately 20,000 rail movements per year.

The second grouping of traffic would considered "through" in nature. This is traffic originates or terminates in areas outside the Buffalo switch district. An important example of this traffic is Canadian-manufactured automobiles heading for distribution terminals in Boston, New York and Baltimore. The reverse of this move is American-manufactured auto parts destined for Canada to serve the manufacturing locations. While "through" in nature a good share of this traffic has a direct impact on yards such as Frontier, Seneca and Tiff. Traffic of this type represent 75,000 rail movements per year.

The third grouping is traffic destined for CPR's SK Yard. This traffic is then fanned out to our interchange partners such as the Norfolk Southern (NS) and Buffalo & Pittsburgh (BP) railroads as well as a number of local shortlines. Another portion of this traffic will connect to our CPR network in the northeast - i.e., the D&H. CPR's northeastern traffic is generally destined to the Ports of Philadelphia and New York and is international in nature. This traffic represents 85,000 rail movements per year.

All in all, CPR traffic moving to or through Buffalo via Niagara Falls totals 180,000 movements annually.
In 1991, with its purchase of the Delaware and Hudson, CPR gained an additional interest in the Buffalo terminal district. CPR's northeastern business i.e., from or to the D&H falls into three distinct categories.

As with the CPR traffic from the West, the first grouping of traffic originates or terminates in the Buffalo switching district connecting CPR's eastern franchise to New England and Pennsylvania to the local consumers and manufacturers. Through a switching arrangement, first with Conrail, then with CSX, CPR has the ability to access Buffalo switch district shippers for its customers east of Buffalo. This traffic arrives at SK yard and is delivered to CSX at Frontier where CSX delivers it to the customers. This represents approximately 5,000 rail movements per year.

The second grouping of traffic arising to or from the D&H would be considered "overhead". This is traffic that originates or terminates in areas outside the Buffalo switch district and is interchanged between CPR's northeast operation and other carriers, such as the NS, BP and Canadian National (CN). While this traffic is "through" in nature the movement of this traffic through the district has a direct impact on yards, bridges and other choke points. Traffic of this type represent 45,000 rail movements per year.

The final category is northeast traffic that originates or terminates outside Buffalo that CPR exchanges with various shortlines, such as the Buffalo Southern Railroad (BSOR), in the area that serves local customers. This traffic represents 2,000 movements per year.

CPR's property in the northeast, the D&H, in total, represents an additional 52,000 movements bringing CPR's total volume to 232,000 rail movements annually.

As you can see, CPR has a significant stake in the smooth operation of the Buffalo terminal area, not only from a local customer service perspective, but also from a through-put operation as well. CPR believes that, while local rail freight operations may have gotten off to a rocky start, the Buffalo area ultimately did not see anywhere near the magnitude of service failures as did other areas of the former Conrail. We believe that Buffalo terminal operations have improved significantly. However some problems still exist -- problems that currently are operational in nature rather than infrastructure-related. This is due partly to the historic summer drop off in business. CPR believes, in general, that any infrastructure improvements that can be made, such as increased yard capacity at Bison and Frontier as well as capacity improvements in the route infrastructure, will bring a new level of service to both the local customers and the customers whose traffic moves through the area.

Accordingly, CPR supports any capacity improvement CSX and NS deem necessary, as these improvements cannot help but have a positive impact on the entire terminal. We do, no
matter how obvious they are, have a brief list of improvements that we feel are necessary for improved service throughout the area. They are as follows.

- If economically feasible restore the 2nd draw bridge at CP Draw. This would allow multiple train movements through this famously congested choke point.
- Connect the Bison Runner to the Buffalo line and connect the Howard Runner to Bison. This would allow for two routes to CP Draw.
- Install a siding at Bison Yard. This would allow trains to be staged when the sidings at Marilla and Attica, on the Southern Tier, are blocked.

One additional comment we would like to make is to point out the impact that operations outside the terminal area has on Buffalo. We refer specifically to network inadequacies such as physical constraints in Selkirk and Binghamton and route structure constraints over the Water Level route and the Southern Tier. While these may not be visible local infrastructure projects they would have a direct impact on Buffalo operations.

In conclusion CPR feels that, while steady progress has been made in Buffalo since the split date, there is room to improve. Continued focus on increasing capacity for switching and freight operations is imperative. Additionally we feel that all the railroads operating in the area need to work together to identify operating problems and resolve them in a fashion that benefits all. Thank you very much.

- Background
- CN Business Base in New York
- Buffalo Operating Issues
- Proposed Solutions
- Summary
Background
North-South Trade Growth

Canada-U.S. trade growing

- NAFTA fuels Canada-US trade growth
- Economies of New York State and Canada are linked
- Northern border of New York important gateway/port of entry

Buffalo is an increasingly important gateway for growing north-south traffic
Significant Canada-New York Trade

- Canada is New York State’s largest trading partner and largest export market
  - $57 billion in imports at N.Y.

- Province of Ontario alone is New York State’s second largest trading partner

- 22% of New York State exports are shipped to Canada
Buffalo Gateway

<thead>
<tr>
<th>Important for CN...</th>
</tr>
</thead>
<tbody>
<tr>
<td>For CN north-south and east-west traffic overall</td>
</tr>
<tr>
<td>Traffic from CN’s service territory to population centers of US Northeast</td>
</tr>
<tr>
<td>Increasing importance with new market opportunities as a result of CN-IC merger and CN-IC-KCS alliance</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>And important for other railroads...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buffalo is a growing major hub</td>
</tr>
<tr>
<td>Essential that traffic flows and service to customers are improved</td>
</tr>
<tr>
<td>At the same time, growth potential must be protected in the overall infrastructure and service plans</td>
</tr>
</tbody>
</table>

CN will continue to support CSX and NS efforts to secure public funding for a new draw in Buffalo area
CN Business Base in New York
CN Traffic Flows Through Buffalo Gateway

CN Statistics (1999)

- CN handled 98,600 carloads via the Buffalo gateway
  - Autos 19,700
  - Parts 9,300
  - Lumber 10,000
  - Newsprint 6,700
- CN revenues: $167 Million
- Over 10,000 cars to/from Buffalo area

Over 25% of all rail traffic through Buffalo is Canadian origin and destination - this will continue to grow
Buffalo Operating Issues
Infrastructure and Capacity Issues

- Belt Line congestion, access to and from Frontier Yard and crossing at CP Draw are major contributors to bottleneck in the Buffalo area

- CN limited in pursuing solutions to benefit Buffalo and New York shippers, and expedite traffic
  - limited access to carriers in Buffalo
  - moving interchange traffic under restricted trackage rights
  - inability to interchange with other carriers, or NS and CSX at more suitable locations

Improved traffic flows require coordinated effort
Proposed Solutions
Proposed Solutions

1. Restoring Niagara Branch for freight use

2. Trackage rights over Niagara Branch to Niagara Falls - also creates alternate route from Canada

3. Direct physical delivery to alternate locations or customer sidings, e.g. Kenmore and Ohio Street Yards

4. Plant/trackage improvements, e.g. new crossovers

5. Direct physical access to Buffalo-area carriers - allows for efficient interchange of traffic

Lifting access restrictions would expedite traffic through Buffalo terminal
Summary
Summary

- CN has an important rail presence in Buffalo

- CN has a significant and positive contribution to make in resolving New York bottleneck issues - and looks to work with customers and railroads to do so

- If CSX and NS cannot provide service, shippers should have access to other carriers (i.e. Houston Emergency Order/Shortline Industry Agreements)

- The proposed remedies are good for shippers, the rail industry and the economy of New York

Increasing north-south trade growth creates opportunity for Buffalo as a major North American working hub
Comments presented to the CSXT and Norfolk Southern (NS) Open Meeting on Thursday, July 27, 2000 in Buffalo, NY.
Gary P. Edwards, Railroad Operations Manager

On behalf of AES Eastern Energy, L.P. which is comprised of AES Somerset, L.L.C., a CSX destination, and AES Cayuga, L.L.C., AES Greenidge, L.L.C., AES Westover, L.L.C., and AES Hickling, L.L.C., Norfolk Southern (NS) destinations. I am here to present our comments and suggestions relative to NS and CSXT’s performance subsequent to the division of Conrail between these two Class 1 carriers.

AES Eastern Energy receives large volumes of coal in both company owned and railroad supplied equipment unit trains. The cycle times we have experienced on our own equipment has not yet returned to the cycle times we consistently obtained under the former Conrail operations. This is particularly disturbing in that the size of our fleet was based on cycle times coupled with the annual coal consumption at each of the plants served by our equipment. When the Class 1 carriers are unable to meet their cycle commitments previously provided, AES must then supplement its own equipment with railroad supplied cars which increases the cost of doing business. Although both carriers have failed to meet the operating standards of Conrail the problem is more pronounced with NS.

Three of our operations receive unit coal trains of railroad supplied equipment and these deliveries are also deficient relative to transit time today versus the Conrail operations.

AES SOMERSET, LLC, 7725 Lake Road, Barker, New York 14012-9600 (716) 795-9501, Fax (716) 795-3654
Typically railroad supplied unit coal trains were loaded on a Thursday for delivery to the plant prior to the start of our day crew on Monday mornings. This scenario allowed for the unloading of each unit train within the allotted free time without incurring demurrage charges. Now, under NS operations loaded trains are being delayed in route with some delays occurring in the Buffalo terminal area or as a result of congestion in the Buffalo area and these trains are not arriving until late in the day on Tuesday. If we move our loading day earlier in the week we then are faced with the possibility of the trains arriving on Friday resulting in our expending overtime through the weekend unloading the trains to avoid demurrage charges.

Besides the delays on the long haul portion of the movement we have also experienced numerous delays in switching at our facilities. Full unit trains may make the yard at Gang Mills and a portion of the train spotted at our yard however the subsequent switch to spot the balance of the train is delayed, in some cases, by twenty four to forty eight hours. This is particularly troublesome when the delay then pushes our unloading operations into weekends creating added labor costs. We have also seen numerous times when a switch of the yard had been promised and people have been brought in to unload cars only to find the cars were not spotted. In some cases cars have not been placed for several days, again causing our operations undue delays and expenses.

It is apparent NS and CSXT continue to be plagued by crew and locomotive shortages. Numerous times we will expend additional effort to complete the unloading of a train
only to have it sit in our yard empty with the explanation they are either looking for a crew or waiting for locomotive power to be assigned. These empty train sets can sit in our yard from twenty four to forty eight hours or more at times.

We have also seen NS trains delayed in the Buffalo area due to the lack of crews to move them over the Southern Tier to Gang Mills. In some of these cases our unit trains were placed on sidings west of Buffalo and the power was pulled. Then when a crew was available it seemed power was unavailable for the train and further delays resulted. In several cases trains loaded one or two days after the original train actually passed a train still sitting on a siding awaiting power and crew.

This crew shortage has also impacted switching services to Hickling. This plant requires a daily switch to unload trains in a timely fashion. It has been the norm rather than the exception that there were no available local crews to provide a switch in the evening to Hickling, located approximately 10 miles from Gang Mills Yard.

Besides the primary coal traffic delivered by CSXT to AES Somerset we also receive individual car shipments of Anhydrous Ammonia for use in one of our environmental compliance systems. This movement is a joint NS/CSXT movement with an NS origin and a CSXT destination. We have found the transit time for a loaded car is anywhere from three to four weeks. This lengthy transit time, to us, seems absurd in that the transit time for trucks delivering the same commodity from the same origin is ten to twelve
hours. In all fairness to both railroads, this move is a new move for us beginning after the
split date. We therefore do not have a comparable Conrail performance to judge it
against however the contrasting transit times between a truck move and a rail move
suggests the rail transit time is excessive thereby leaving a lot of room for improvement.

Finally NS’s operations between Buffalo and Ashtabula continue to be slowed by
congestion on this single main line track and congestion on the NS line between
Ashtabula and Youngstown impacts both CSX destined unit coal trains as well as NS
destined unit coal trains for AES. This route was pointed out as a choke point to NS and
CSX as far back as the original STB hearings on the division of Conrail. In that NS is the
owner of the Ashtabula line and is the railroad with the poor connection for train
movement from the Pittsburgh Seam coal fields into the Buffalo area I will say NS has
not taken adequate measures to alleviate congestion on this route. Delays over this route
directly impact both railroad and in particular, the operations of NS in the Buffalo area.

If trains cannot efficiently operate over the route they are likely backed up into the
Buffalo area creating unneeded congestion in the Buffalo Terminal or they are delayed in
arriving at the Buffalo Terminal increasing the likelihood they could be delayed from
delivery to the customer in the Buffalo area.

On numerous occasions we have provided both CSXT and NS with suggestions to
changes in their operations we felt would help improve the operating efficiency of both
railroads and would like to take this opportunity to reiterate those suggestions. The
suggestion we believe could have the most positive impact on NS's overall congestion problems between Youngstown, Ohio and Buffalo and the Buffalo Terminal would be the rerouting of traffic over the former Erie-Lackawana line between approximately Hubbard, Ohio and Hornell, New York. This could eliminate delays occurring on the waterlevel route at Ashtabula due to the lack of facilities to allow a progressive move from the Youngstown Line east to Buffalo. Eliminating these delays could provide relief to congestion on this line for through traffic running between Buffalo and Cleveland and as a result help reduce the amount of trains backed up in the Buffalo Terminal.

When this alternative has been mentioned in the past we have heard numerous excuses why it would not work. Our contention however is a train moving across this alternative route at 10 MPH would likely reach Gang Mills sooner than being tied up in the congestion on the water level route and in the Buffalo Terminal. Rerouting of AES destined trains alone would take 320 trains annually out of the Buffalo Terminal area allowing additional capacity for existing traffic as well as capacity for new traffic.

Our next suggestion, again for NS, is the installation of a siding at our Cayuga facility to accommodate the storage of two to three locomotives while we unload the unit coal trains. Currently the crews are running light back to Ithaca Yard with the locomotives once the train has been placed in our yard. The run is approximately 14 miles and could be considered unproductive time for a train crew. By needing to run back into Ithaca with the power this move also interferes with service by the local crew to another
customer on the line, Cargill. With a siding at Cayuga once the loaded train is spotted the crew could simply put the power in the siding and taxi back to Gang Mills. Upon release of the empty train a crew would be taxied to Cayuga, tie on the train for the run back to Gang Mills thereby allowing the crew more time to actually move a train versus running light power back and forth to Ithaca.

For CSXT we would suggest the practice of leaving locomotives at Somerset, once a loaded train is delivered, become routine instead of the exception. CSXT could make the necessary arrangements to have rear end markers charged and the power serviced at our facility ready to run back to Newell Yard in Pennsylvania once we have completed unloading operations. This would at least eliminate the need to wait for locomotives when empties are made available reducing delays to our unit train cycle times. This would also improve track capacity in the Buffalo Terminal area which is reduced when you operate light power back and forth between Somerset and Frontier Yard.

Finally we would like to ask CSXT to investigate the possibility of a longhaul crew to run between Somerset and Ashtabula. This would reduce the overall number of crews required to move the unit coal train between the mine and the plant and would eliminate the need for a recrew at Buffalo. Running time between Ashtabula and Buffalo and Buffalo and Somerset would indicate a single crew could make this move without violation of the Hours of Service Laws. This type of move could add significantly to the improvement in cycle times for our unit trains.
July 26, 2000

Richard F. Timmons
Resident Vice President
Norfolk Southern Corporation

Re: July 27, 2000 Buffalo, NY Proceeding

Dear Mr. Timmons:

I am enclosing a copy of my prepared remarks for the July 27, 2000 Buffalo NY open meeting. We look forward to working with Norfolk Southern to improve operations in the Buffalo, New York area, and throughout western New York and northwestern Pennsylvania. Please feel free to contact me with any questions.

Sincerely,

DONALD R. RYCHNOWSKI
Executive Director
I am here to make two primary points relating to service and operations in the Buffalo, New York area.

First, infrastructure improvements and operating changes relating to Norfolk Southern’s Southern Tier Extension line would positively impact the ability of Norfolk Southern to provide better service in and around the Buffalo, New York area.

Second, Norfolk Southern should develop a comprehensive response involving both infrastructure and operations that will reduce the safety and emergency vehicle access concerns in the City of Dunkirk in Chautauqua County, New York.

I would like to expand on these two points.

As to the first point, the Southern Tier Extension should be seen as an alternative to congestion and shipping volume problems in the Buffalo region. Through traffic that currently passes east-west through Buffalo but which does not have to pass through Buffalo could be shipped on the Southern Tier Extension, avoiding Buffalo. This would reduce the traffic volume in Buffalo, reduce congestion in Buffalo, and consequently improve Norfolk Southern’s ability to serve Buffalo region shippers.

To accomplish this, Norfolk Southern could run from Erie, Pennsylvania using its trackage rights over the Allegheny and Eastern to Corry, Pennsylvania, whereupon Norfolk Southern could run on the Southern Tier Extension to Hornell, New York, connecting with the Southern Tier line. This would have added side benefits of providing service to a number of prospective shippers in northwestern Pennsylvania and southwestern New York. Norfolk Southern also has a yard in Olean, New York on the southern Tier Extension, with north-south connections to Buffalo on the Buffalo, NY - Keating, PA line. There also should be operating advantages to this additional connection to Buffalo that could be of benefit to Buffalo region shippers.

To accommodate this, in June 1998 Norfolk Southern entered into an agreement with New York State and the Southern Tier West Regional Planning and Development Board. In this matter, Southern Tier West was acting as the agent of the four counties in New York State in which the Southern Tier Extension is located. This agreement provided for the provision of real estate tax abatements in return for certain service commitments by Norfolk Southern. In June 2000, New
York State finally created a railroad authority to implement this agreement. Reopening the entire Southern Tier Extension, making necessary infrastructure repairs and upgrades, and operating on the entire line, either by Norfolk Southern or by a designated short line railroad, would benefit the system as a whole, as well as the shippers along the Southern Tier Extension. We request that Norfolk Southern implement this agreement, and we stand ready to assist Norfolk Southern in this regard.

As to the second point, the Buffalo Region includes the City of Dunkirk to the southwest of Buffalo. The number of Norfolk Southern trains in Dunkirk has increased over the past year, posing a safety issue to pedestrians and automobile traffic owing to Norfolk Southern’s grade crossings in the City. This has resulted in traffic queues and flow problems, and the potential for disrupted emergency vehicle service. Norfolk Southern has proposed eliminating these grade crossings by truncating the City streets so that they do not cross the rail line. This poses an even greater traffic and safety problem, and does not address the issue of pedestrian safety. Thus far, Norfolk Southern has agreed to place signage at City grade crossings and has promised to hold crossing safety classes. We request that Norfolk Southern develop a more permanent and comprehensive solution to this problem.

As a unit of government in southwestern New York and as an advocate for rail transportation, Southern Tier West Regional Planning and Development Board offers its assistance with respect to rail issues that affect western New York and northwestern Pennsylvania. Thank you for this opportunity to present our position.

HEADLINE: RUNAWAY TAX RATES

TEXT: The State Legislature’s irresponsible failure to deal with ridiculously high railroad property taxes could force what should be a legislative debate into a courtroom confrontation. It’s up to the Legislature to head that off, and to take prompt action when the next legislative session begins in January.

Simply put, the high tax rate for railroads in New York is a major barrier to railroad investment and system improvements here. That hurts shippers, discourages business development and hampers efforts to spur job growth.

State law imposes a different property-assessment formula for railroads than it does for other properties. The state also mandates a 99-year depreciation schedule for tracks, in effect taxing them at full value, while the federal standard is depreciation over seven years. So railroads pay about three times more in New York than they would in surrounding states.

That’s a strong disincentive to investment. In fact, the railroads have actually removed unused switches and other equipment -- things that take months to replace if a new business-development need arose -- just to avoid paying taxes on them. That’s a step backward, not a spur to the improvements in long-range bulk transportation systems that Western New York industries need to remain competitive.

The property-tax issue became embroiled in the railroad-service fiasco that followed last year’s breakup of Conrail and distribution of its local assets to CSX and Norfolk Southern. Although the railroads have a legitimate gripe, they didn’t help themselves with their abysmal performance after the Conrail breakup. Long delays and degraded service hurt local shippers.

Coming to their aid had all the appeal of seeking lower taxes for robber barons. It’s why local development agencies, understandably, have called for more concrete expansion commitments from the railroads before any tax break is granted.

By all accounts, though, service has improved. Both railroads have made major local facilities investments in a concerted effort to stem the complaints and get service back on track. Future expansion now hinges on a tax-relief bill that didn’t come to a vote in either the Assembly or the Senate this year but will be on the agenda again next year.

And time is a factor here. Conrail negotiated a 1997 property-tax settlement that froze railroad assessments. That freeze expires next month, and the state’s Office of Real Property Services could direct local assessors statewide to reappraise tracks and yards at 2001, not 1995, land values. Already astronomical tax rates could double, railroad officials said.

Meanwhile, state legislators aren’t rushing to make commitments. Any drop in railroad taxes will drop tax revenues for about 700 towns, villages, cities and school districts statewide, which collectively depend on the railroads for $36 million a year in property taxes. That’s not something lawmakers want to bring back from Albany in an election year.
The challenge in the next legislative session will be to craft property-tax relief that is fair to the railroads and encourages them to expand here rather than in other states, without dropping the whole burden on local governments and school districts. It's a job that should have been done this year, but better late than never.
